

Selling IQVIA CTFS

Persona-Based, AI-Enhanced Sales Execution for Clinical Trial Financial Transformation

For IQVIA Account Executives

Explain CTFS Clearly

Tailor by Persona

Lead Discovery

Handle Objections

Use AI as Teammate

Build AI Sales Tool

COMPANY CONFIDENTIAL

Course Promise

This is not generic product training.

You will learn how to sell CTFS by connecting the right elements into a compelling, buyer-centered conversation.

What You Will Connect

- Buyer pain
- Clinical trial financial workflows
- Persona priorities
- Business outcomes
- AI-supported sales preparation
- Practical role-play practice

The Core Question

What can you now do better with AI than you could before?

This course is built around that question — and gives you the tools, frameworks, and practice to answer it with confidence in every customer conversation.

Course Map

Eight modules designed to build your CTFS selling capability from the ground up — from market context to a fully functional AI Sales Teammate.

CTFS Market and Business Problem

CTFS Core Value Proposition

Persona-Based Selling

AI-Enhanced Account Planning

Discovery and Value Conversations

Objection Handling and Competitive Positioning

Demo and Storytelling Preparation

Capstone: Build a CTFS AI Sales Teammate

Why CTFS Matters

⚠ Clinical trial financial management is often fragmented — and fragmentation has real business consequences.

Manual Processes

Teams rely on spreadsheets and email instead of integrated systems.

Disconnected Systems

Budgeting, contracting, and payments live in separate tools.

Slow Payments

Sites wait weeks or months for reimbursement, straining relationships.

Limited Visibility

No single view of financial status across studies or geographies.

Compliance Complexity

Multi-currency, multi-country requirements add operational burden.

Scaling Challenges

Global operations are difficult to manage without unified infrastructure.

📌 **Seller Takeaway:** CTFS is a **business transformation conversation**, not just a product conversation.

The Core Business Problem

Fragmented financial workflows slow down trial execution. Understanding *where* the breakdown happens is the foundation of every CTFs conversation.

Ask your buyer: Where does your organization lose time, visibility, trust, or control in the financial workflow?

The Pain Chain

Every fragmented process creates a cascade of downstream consequences. Great sellers don't stop at the surface symptom — they follow the chain.

What Delays Create

- Site frustration and relationship damage
- Payment disputes and escalations
- Reduced financial visibility
- Higher operational burden
- Slower study execution

Sales Move

Do not stop at "payment delays." Ask what the delay **causes** — for the site, for the team, for the study, and for the business.

CTFS in One Sentence

IQVIA Clinical Trial Financial Suite helps sponsors **unify and automate** clinical trial financial workflows across budgeting, contracting, forecasting, payments, document processing, invoice reconciliation, anomaly detection, and global operations in an AI-enabled platform.

Plain-English Version

CTFS helps customers move from **disconnected manual trial finance work** to a more **connected, visible, and scalable operating model**.

This is the sentence you should be able to say naturally, confidently, and in under 15 seconds — in any conversation, at any level of the organization.

What It Covers

- Budgeting & contracting
- Forecasting & payments
- Document processing
- Invoice reconciliation
- Anomaly detection
- Global operations
- AI-enabled workflows

CTFS Core Value Proposition

CTFS creates value when it connects workflows, people, data, and decisions across the clinical trial financial lifecycle.

Reduce Fragmentation

Unify disconnected systems into a single financial operating model

Improve Visibility

Give every stakeholder a clear view of financial status across studies

Automate Manual Steps

Replace error-prone manual work with intelligent, automated workflows

Site-First Operations

Support faster, more transparent site financial operations

Global Readiness

Enable multi-currency, compliance-ready global financial workflows

AI-Enabled Workflows

Use AI responsibly and practically to accelerate financial operations

CTFS Capability-to-Value Map

Every CTFS capability maps directly to a business outcome. Use this map to translate product features into buyer-relevant value language.

Capability	Business Value
Budgeting, contracting, forecasting, payments	More connected financial management across the trial lifecycle
Document processing	Less manual review and faster data handling
Invoice reconciliation and anomaly detection	Fewer exceptions, better control, and reduced financial risk
Site payment portal	Better visibility and fewer payment disputes for sites
APIs and webhooks	Integration flexibility and AI workflow orchestration

 Use this map in discovery to connect what the customer is experiencing to the specific CTFS capability that addresses it.

CTFS Is More Than Site Payments

The Entry Point

CTFS Site Payments is an important and well-recognized entry point into the conversation.

But leading only with site payments **undersells the platform** and limits your deal size.

Sales Move

Start with the buyer's pain, then **expand the conversation** to the full CTFS story.

The Full CTFS Story

- Budgeting
- Contracting
- Forecasting
- Site payments
- Participant payments
- Document processing
- Invoice reconciliation
- Anomaly detection
- Global financial operations
- AI-enabled workflow orchestration

The Status Quo Conversation

"We already have a process."

When a customer says this, your job is not to argue — it's to explore. Use these questions to turn a dismissal into a real workflow discussion.

How manual is it?

Understand the volume of human effort required to keep the process running.

How visible is it?

Can every stakeholder see financial status in real time, or do they have to ask?

How scalable is it?

Does the process hold up as study count, geography, and complexity grow?

How many systems does it touch?

Count the handoffs — each one is a potential failure point.

How often do sites ask for payment updates?

Site inquiries are a proxy for payment transparency gaps.

How easily can you report across studies?

Cross-study, cross-geography reporting reveals integration maturity.

✅ **Goal:** Turn "we have a process" into a real, specific workflow discussion that surfaces pain.

Business Outcomes CTFS Can Support

Connect CTFS to outcomes that matter to your buyer. Always anchor every outcome in what you learned during discovery — never make unsupported claims.

Faster Financial Cycle Times

Reduce the time from budget approval to site payment through connected, automated workflows.

Lower Operational Burden

Fewer manual steps means teams spend time on higher-value work instead of chasing data.

Improved Site Satisfaction

Transparent, timely payments strengthen site relationships and support retention.

Scalable Global Operations

Multi-currency, compliance-ready infrastructure that grows with your study portfolio.

Fewer Payment Disputes

Better visibility and reconciliation reduce exceptions and escalations

Budget-to-Payment Visibility

End-to-end financial transparency across the trial lifecycle

AI

AI-Enabled Foundation

Stronger platform for intelligent, scalable financial transformation

The CTFS Sales Story

Use the **Challenge** → **Solution** → **Advantage** → **Future** structure to build a compelling, consistent narrative in every customer conversation.

Challenge

Clinical trial finance is fragmented and manual. Disconnected systems create delays, disputes, and limited visibility across the trial lifecycle.

Solution

CTFS unifies and automates financial workflows — from budgeting and contracting through payments, reconciliation, and global operations.

Advantage

CTFS combines platform breadth, AI-enabled workflows, global readiness, and integration flexibility in a single, purpose-built solution.

Future

CTFS supports scalable, modular, AI-enabled clinical trial financial operations — built to grow with your organization.

AI Prompt — Turn Features Into Value

Use this copy-ready prompt with your AI tool to generate persona-specific value messaging for any CTFS conversation.

Act as my CTFS sales message coach.

Turn these CTFS capabilities into business-value language:

budgeting, contracting, forecasting, site payments,
participant payments, document processing, invoice
reconciliation, anomaly detection, APIs, webhooks,
and global operations.

Create:

1. A 30-second executive message
2. A 60-second clinical operations message
3. A 60-second IT message
4. A 60-second digital transformation message

Do not invent unsupported claims.

Why This Prompt Works

It forces the AI to translate capabilities into outcomes — the same shift you need to make in every buyer conversation. Run it before each account meeting to arrive with persona-ready language.

How to Use It

- Copy the prompt into your preferred AI tool
- Review and edit the output for accuracy
- Adapt the language to your specific buyer
- Never use AI output without reviewing it first

Practice Activity — Pain Chain Mapping

Choose one real or hypothetical customer scenario and build a complete pain-chain map. This is the core account planning tool for CTFS selling.

1 Current Process Describe how the customer manages clinical trial finance today	2 Manual Steps Identify where human effort replaces automation
3 Disconnected Systems Map the tools and handoffs that create gaps	4 Delays or Disputes Note where the process breaks down or creates friction
5 Stakeholders Affected Identify who feels the pain — sites, finance, operations, IT	6 Business Impact Quantify or qualify the cost of the current state
7 CTFS Value Connection Map the specific CTFS capability that addresses each pain	8 Discovery Question Write the question you would ask to validate the pain with the buyer

✔ **Output:** A one-page account pain-chain map you can use in your next CTFS discovery conversation.

Knowledge Check

Which statement best frames the CTFS business problem?

A

CTFS is only a payment tool.

B

CTFS replaces every sponsor system immediately.

C

CTFS addresses fragmented, manual clinical trial financial workflows by unifying and automating key financial processes.

D

CTFS is mainly an AI experiment.

✔ **Sales Takeaway:** Lead with business pain before product features. The buyer's problem is always the starting point — CTFS is the answer.

What You Can Now Do

- Explain CTFS clearly and confidently
- Tailor the message by persona
- Lead stronger discovery conversations
- Handle common objections
- Use AI as a sales preparation teammate
- Build a reusable CTFS AI Sales Teammate

Your Next Step

Apply the pain-chain mapping activity to a real account in your pipeline. Use the AI prompt to generate persona-specific messaging before your next CTFS discovery call.

The best CTFS sellers lead with the customer's problem — and let the platform tell its own story.

Persona-Based Selling

CTFS must be positioned differently by stakeholder. The product story stays consistent — the entry point changes by persona.

Digital Transformation Leader

Clinical Operations Leader

IT Leader

Site or Study Operations Leader

📌 Your job: Connect CTFS to what each stakeholder already cares about.

The Four CTFS Buyer Personas

Each persona has a distinct set of priorities. Understanding these differences is the foundation of effective persona-based selling.

Digital Transformation Leader

Wants scalable AI, measurable ROI, and operational proof points.

Clinical Operations Leader

Wants trial execution speed, visibility, and site satisfaction.

IT Leader

Wants integration, compliance, governance, and scalable architecture.

Site or Study Operations Leader

Wants predictable payments, fewer disputes, and less administrative burden.

PERSONA 1

Digital Transformation Leader

Example persona: Andrés, Digital Transformation Leader

What They Care About

- Scalable digital innovation
- AI beyond pilots
- Measurable ROI
- Enterprise governance
- Extensible AI ecosystem
- Lower system redundancy

CTFS Message

CTFS helps operationalize agentic AI across clinical finance workflows through APIs, webhooks, orchestration, governance, and measurable KPIs.

Digital Transformation Pain Points

AI Pilots Stall

AI pilots stall before reaching operational scale — stuck in proof-of-concept limbo.

Disconnected Tools

AI tools are disconnected from actual workflows, limiting real-world impact.

ROI Hard to Prove

Transformation teams struggle to demonstrate measurable return on AI investments.

Trapped in Silos

Transformation work is fragmented across business units with no cross-functional automation.

Discovery angle: Where has AI failed to move from experiment to operational impact?

Digital Transformation Discovery Questions

1 Where have AI pilots stalled?

Where have AI pilots stalled because they were not connected to operational workflows?

2 How are you measuring ROI?

How are you measuring ROI for AI initiatives in clinical operations or finance?

3 Which workflows are most manual?

Which clinical finance workflows are most manual or exception-heavy?

4 Cross-agent orchestration?

How important is cross-agent orchestration in your AI strategy?

5 Governance requirements?

What governance or transparency requirements must be met before AI can scale?

✓ **Best CTA:** Identify one pilot use case with measurable operational value.

AI Prompt – Digital Transformation Talk Track

Use this copy-ready prompt to generate a tailored CTFS value message for a digital transformation leader.

Create a CTFS value message for a digital transformation leader focused on agentic AI orchestration, measurable ROI, governance, and scaling AI beyond pilots.

Structure your output using these five components:

01

Likely Pain

Identify the core frustration this persona experiences today.

02

Business Impact

Articulate the downstream consequence of that pain.

03

CTFS Value Message

Connect CTFS capabilities directly to the pain and impact.

04

Discovery Question

Open a consultative dialogue to deepen the conversation.

05

Pilot-Oriented CTA

Close with a concrete, low-risk next step.

Keep it concise and avoid unsupported claims.

PERSONA 2

Clinical Operations Leader

Example persona: Gilbert, Clinical Operations Director

What They Care About

- Trial execution speed
- Site satisfaction
- Financial visibility
- Global scalability
- Reduced manual effort
- Faster cycle times

CTFS Message

CTFS unifies budgeting, contracting, forecasting, and payments to help clinical operations teams improve visibility, reduce fragmentation, and support site-first execution.

Prepared by ESource AI Group for Demonstration Purposes

Clinical Operations Pain Points

Disconnected Workflows

Budgeting, contracting, forecasting, and payments operate in silos, slowing execution.

Manual Processes

Manual processes slow study execution and consume team bandwidth on low-value tasks.

No Payment Transparency

Sites lack visibility into payment status, straining sponsor-site relationships.

Global Complexity

Global operations add layers of complexity that existing tools cannot handle efficiently.

Discovery angle: Where do financial workflows slow trial execution or damage site experience?

Clinical Operations Discovery Questions

- Where do financial workflows slow study execution today?
- What manual work exists in payment processing, invoice review, or CTA interpretation?
- What visibility do teams have from budget through payment?
- How are payment delays affecting site relationships?
- Where do you see duplication across budgeting, contracting, forecasting, and payments?
- What would improve sponsor-site financial operations?

✓ **Best CTA:** Map the budget-to-payment process and identify the highest-friction workflow.

PERSONA 3

IT Leader

Example persona: Reena, VP IT Clinical

What They Care About

- Integration and interoperability
- Compliance and security
- Scalable architecture
- Reduced tech debt
- Future-ready AI architecture

CTFS Message

CTFS is a cloud-native, API-first, agent-ready platform that supports interoperability, compliance, and scalable AI-enabled workflow orchestration.

IT Pain Points

Fragmented Financial Systems

Disconnected tools create reconciliation challenges and data quality issues across clinical finance.

Integration Complexity

High maintenance burden from integrating multiple point solutions in a regulated environment.

Data Governance Concerns

Regulated environment constraints make data governance and audit readiness a constant challenge.

AI Readiness Questions

Too many disconnected tools raise questions about whether the architecture can support AI at scale.

 **Discovery angle:** How can CTFS fit into the existing clinical systems landscape without increasing risk?

IT Discovery Questions

- 1 Which systems would CTFS need to integrate with?
- 2 Where do disconnected financial workflows create data quality or reconciliation challenges?
- 3 What integration standards matter most?
- 4 How are you evaluating AI-enabled platforms for compliance and audit readiness?
- 5 Where is tech debt limiting automation today?
- 6 What would make an AI-enabled clinical finance platform acceptable to IT?

✓ **Best CTA:** Schedule a technical discovery session.

AI Prompt — IT Discovery Prep

Use this copy-ready prompt to generate targeted discovery questions for a VP of Clinical IT.

Help me prepare discovery questions for a VP of Clinical IT concerned about integration, compliance, APIs, webhooks, audit readiness, and AI governance.

Group questions by these six categories:

- 1. Architecture**
Platform design, cloud-native readiness, and scalability.

2. Data Flow
How data moves between systems and where gaps exist.

3. Compliance
Regulatory requirements and audit trail expectations.

4. Integration
APIs, webhooks, and existing system connections.

5. Risk
Security, governance, and change management concerns.

6. Next Step
A practical, consultative close to advance the conversation.
-  Make the questions practical and consultative.

PERSONA 4

Site or Study Operations Leader

Example persona: Rachel, Clinical Operations Director

What They Care About

- Predictable cash flow
- Fewer payment disputes
- Less administrative burden
- Faster payment cycles
- Consistent site experience
- Clear payment status and audit history

CTFS Message

CTFS automates invoice creation and validation, centralizes payment visibility, and reduces manual follow-up and disputes — giving site teams more time to run the study.

Site or Study Operations Pain Points

Manual Invoicing

Manual invoicing and email follow-ups consume lean team resources that should be focused on study execution.

Payment Delays

Payment delays strain site relationships and create cash flow uncertainty for research sites.

Disputes Over CTA Terms

Disputes over CTA terms or activity records create back-and-forth that slows resolution.

Limited Visibility

Inconsistent payment status visibility across studies and geographies leaves teams chasing updates.

Discovery angle: How much time is spent chasing payment status instead of running the study?

Persona-Based Selling Practice

Activity: Rewrite one generic CTFS pitch for all four personas.

Create Four Versions

01

Digital Transformation Version

02

Clinical Operations Version

03

IT Version

04

Site or Study Operations Version

Peer Review Criteria

- Persona relevance
- Clear pain articulation
- Business value connection
- CTFS accuracy
- Strong call-to-action

Sales takeaway: Persona-based selling changes the entry point, not the truth.

AI-Enhanced Account Planning

AI should help you prepare more thoughtfully — not replace the judgment, curiosity, and human connection that drive great sales conversations.

Research Assistant

Accelerate account research

Stakeholder Mapping

Map influence and priorities

Persona Builder

Hypothesize buyer profiles

Meeting Planner

Structure agendas with purpose

Question Generator

Build discovery question sets

Message Personalizer

Tailor outreach by persona

Important: AI supports judgment. It does not replace it.

Responsible AI Use in Sales

✓ Use AI To

- Organize your thinking
- Create first drafts
- Practice conversations
- Identify gaps in your prep
- Improve message clarity
- Personalize outreach

⊘ Do Not Use AI To

- Invent customer facts
- Invent CTFS features
- Create unsupported ROI claims
- Use confidential information in unapproved tools
- Replace customer discovery

📄 **Rule:** Label assumptions clearly. Every AI output should be reviewed, verified, and personalized before use.

AI Account Planning Workflow

Follow this seven-step process to use AI effectively before, during, and after every account interaction.

01	02	03
Enter Approved Account Context Start with verified, approved notes — never confidential or unapproved data.	Ask AI for Stakeholder Hypotheses Generate likely stakeholder roles, priorities, and concerns.	Generate Persona-Specific Discovery Questions Tailor questions to each stakeholder's role and pain area.
04	05	06
Identify Likely Objections Anticipate resistance and prepare thoughtful responses.	Create a Meeting Agenda Structure the conversation with clear goals and a strong CTA.	Manually Verify, Edit, and Personalize Apply your judgment — AI output is a starting point, not a final answer.
07		
Use AI Again After the Call Leverage AI for coaching, follow-up drafts, and next-step planning.		

AI Prompt — Account Planning

Use this copy-ready prompt to kick off structured account planning with AI. Paste it directly into your approved AI tool and fill in the bracketed fields.

Act as my CTFS account planning teammate.

Account context: [Insert approved notes]

Stakeholders: [Insert titles]

Help me create:

1. Likely business problems
2. Stakeholder-specific priorities
3. Persona hypotheses
4. Discovery questions
5. Likely objections
6. Suggested meeting agenda
7. Best next-step call-to-action

Do not invent facts. Label assumptions clearly.

 This prompt is designed to generate hypotheses — not facts. Always verify AI output against real account knowledge before using it in a customer conversation.

Stakeholder Mapping

In most CTFS opportunities, several stakeholders influence the decision. Mapping the full buying group prevents over-messaging one persona while ignoring others who may block or accelerate the deal.

	Economic Buyer Controls budget and final approval authority.
	Clinical Operations Owner Owns the workflow and day-to-day process impact.
	IT / Architecture Reviewer Evaluates integration risk and technical feasibility.
	Digital Transformation Sponsor Champions strategic change initiatives across the organization.
	Site Operations Voice Represents the experience of clinical trial sites.
	Finance / Procurement Reviews cost, contracts, and vendor terms.
	Compliance / Governance Ensures regulatory and policy requirements are met.

 **Sales Move:** Do not over-message one persona and ignore the others. Multi-threaded deals close faster and more reliably.

Discovery and Value Conversations

Strong CTFS discovery connects workflow friction to business outcomes. The goal is to get the customer to define the cost of the status quo — in their own words.

What Discovery Should Uncover

- Current workflow and manual steps
- Disconnected systems and data silos
- Delays, disputes, and bottlenecks
- Business impact of the friction
- Stakeholders affected by the problem
- Decision criteria and success metrics
- Agreed-upon next step

The Discovery Goal

Move the customer from describing symptoms to quantifying the cost of inaction.

When a customer can articulate what staying the same costs them — in time, money, risk, or relationships — urgency becomes real.

Discovery is not a pitch. It is a diagnostic conversation.

CTFS Discovery Flow

Use this six-stage flow to guide every discovery conversation from current state to a clear, agreed-upon next step.

Each stage builds on the previous one. Skipping stages — especially Impact and Value — leaves the customer without a compelling reason to act.

Universal CTFS Discovery Questions

These questions apply across personas and opportunity types. Use them to open up the conversation and surface the friction that CTFS is built to solve.

Workflow & Process

How are budgeting, contracting, forecasting, invoicing, and payments managed today? Which parts are manual or spreadsheet-driven?

Handoffs & Duplication

Where do handoffs break down? Where do teams duplicate data entry across systems?

Disputes & Visibility

What causes payment disputes? What visibility do sponsors and sites have into payment status?

Systems & Urgency

Which systems are involved in the current workflow? What would make this initiative urgent to prioritize now?

AI Prompt – Discovery Planner

Use this copy-ready prompt to generate a structured set of discovery questions tailored to a specific persona and pain area. Fill in the bracketed fields before using.

Help me prepare discovery questions for a [persona/title]
who may be concerned about [pain area].

CTFS context: CTFS helps unify and automate clinical trial
financial workflows across budgeting, contracting,
forecasting, payments, document processing, reconciliation,
anomaly detection, and global operations.

Create 12 questions grouped by:

1. Current state
2. Pain
3. Impact
4. Urgency
5. Decision criteria
6. Next step

 Tip: Run this prompt for each key stakeholder in your account. Compare the outputs to identify gaps in your discovery plan before the meeting.

Practice Activity – Discovery Ladder

Great discovery goes deeper with every question. Start with a broad opening question, then follow the thread to uncover real business impact.

Objection Handling Framework

When a customer raises a concern, the instinct to defend or pitch is natural — but counterproductive. Use the **A.C.T.** framework to turn objections into discovery moments.

A — Acknowledge

Recognize the concern without dismissing it. Show the customer that you heard them and that their concern is valid.

C — Clarify

Ask what is behind the objection. Surface the real concern before attempting to respond. Never assume you know what they mean.

T — Tie Back

Connect the concern to CTFS value, relevant proof, and a logical next step that moves the conversation forward.

"That makes sense. Integration risk is a real concern. Which systems would matter most in the first phase?"

Common CTFS Objections

Be ready for these objections in any CTFS conversation. Preparation is the difference between a defensive response and a confident, value-driven reply.

→ "Implementation sounds difficult."

→ "We already use legacy platforms."

→ "We already have a payment solution."

→ "Sites may resist another portal."

→ "Integration is our biggest concern."

→ "Compliance is a concern."

→ "We are not ready for AI."

→ "We are building this internally."

→ "We need ROI before we can move forward."

📌 Each of these objections is an invitation to discover more. Use A.C.T. to turn resistance into a richer conversation.

Objection Response — Existing Payment Solution

One of the most common objections in CTFS sales. The key is to avoid a defensive comparison and instead open up discovery.

Customer Says "We already have a payment solution."	Weak Response ✗ "CTFS is better."	Better Response ✓ "That is helpful context. Where does your current solution connect with budgeting, contracting, forecasting, invoice validation, and site visibility today?"
---	---	--

👍 **Why it works:** It turns a defensive moment into discovery. Instead of competing, you are mapping gaps — and letting the customer identify them for you.

Objection Response — Integration Concern

Integration risk is a legitimate concern for IT and architecture stakeholders. Respect it — and use it to move toward a technical discovery session.

Customer Says

"Integration is our biggest concern."

Better Response

"That makes sense. Which systems would be most important to connect first: CTMS, EDC, ERP, banking systems, or another workflow? A technical discovery session may be the right next step."

✅ **Why it works:** It respects IT risk and moves toward validation. You are not dismissing the concern — you are making it the agenda for the next conversation.

Key Principle

Never minimize integration concerns. IT stakeholders who feel heard become allies. IT stakeholders who feel dismissed become blockers.

CTFS Positioning

CTFS is built API-first and agent-ready, designed to connect with existing systems rather than replace them. Lead with this when integration risk is raised.

AI Prompt — Objection Practice

Use this copy-ready prompt to practice objection handling with AI as your sparring partner. Fill in the bracketed persona field before using.

Act as a skeptical [persona] evaluating IQVIA CTFS.

Raise one realistic objection at a time about:

- Implementation
- Integration
- Compliance
- Change management
- ROI
- Existing platforms
- Point solutions
- AI readiness

After I respond, score me on:

1. Acknowledgment
2. Clarification
3. Business-value framing
4. CTFS accuracy
5. Next-step strength

Then give me a stronger response.

 Use this prompt repeatedly — once per objection type. The scoring feedback will sharpen your responses faster than any static script.

Role-Play Activity — The Skeptical Buyer

Scenario: A VP Clinical IT says: *"We are already overburdened with integrations, and I am not convinced adding another platform helps."*

Seller Goal

- Acknowledge the concern genuinely
- Clarify integration priorities with a question
- Connect to CTFS API-first, agent-ready positioning
- Propose a technical discovery session as the next step

Observer Scores

- Did the seller stay calm and avoid defensiveness?
- Did the seller ask a clarifying question before responding?
- Did the seller earn a clear, agreed-upon next step?

A — Acknowledge

Validate the burden of integration complexity.

C — Clarify

Ask which systems matter most in phase one.

T — Tie Back

Position CTFS as a connector, not another silo.

Next Step

Propose a focused technical discovery session.

Demo and Storytelling Preparation

A CTFS demo should not be a feature tour. **A strong demo is a business story supported by product proof.** Before showing the platform, you must answer five critical questions that shape every moment of the conversation.

1

Who is in the room?

Know your audience before you speak

2

What pain matters most?

Lead with the problem, not the product

3

Which workflow is under pressure?

Anchor to operational reality

4

What outcome does the customer want?

Connect to business goals

5

What next step should the demo support?

Every demo should advance the deal

CTFS Story Structure

Use the **Challenge** → **Solution** → **Advantage** → **Future** framework to build every CTFS story. This structure keeps the narrative buyer-focused and outcome-driven.

Challenge

Fragmented financial management slows trials and creates operational drag

Solution

CTFS unifies and automates clinical trial financial workflows end-to-end

Advantage

Platform breadth, AI-enabled workflows, global readiness, and integration flexibility

Future

Scalable, modular, AI-enabled clinical trial financial operations at any scale

Adapt the Demo by Persona

Rule: Show what matters to the buyer, not everything you know. Each persona has distinct priorities — tailor every demo moment to the person in the room.

Digital Transformation

Show AI orchestration, measurable ROI, extensibility, and governance controls

Clinical Operations

Show workflow visibility, site satisfaction, global scalability, and reduced manual effort

IT Leader

Show architecture, APIs, webhooks, compliance, and audit-ready controls

Site / Study Operations

Show invoice automation, payment visibility, fewer disputes, and the site portal

AI Prompt — Demo Story Coach

Use this copy-ready prompt to generate a tailored CTFS demo story for any persona and customer situation. Paste it directly into your AI tool of choice.

 Replace bracketed fields with real account context before using.

Copy-Ready Prompt

Help me build a CTFS demo story for a [persona/title].

Customer pain: [Insert pain]

Meeting goal: [Insert goal]

Use the Challenge, Solution, Advantage, Future structure.

Include:

1. Opening talk track
2. Three demo moments to emphasize
3. Discovery questions to ask during the demo
4. Likely objections
5. Recommended close

Keep the language practical and buyer-specific.

Practice Activity – Three-Minute CTFS Story

Prepare and deliver a three-minute CTFS story. Choose one persona and use the full Challenge → Solution → Advantage → Future structure.

Choose Your Persona

Digital Transformation Leader

Clinical Operations Leader

IT Leader

Site / Study Operations Leader

Peer Feedback Criteria

- Was the **pain clear** and compelling?
- Was the message **persona-specific**?
- Was the **CTFS value accurate**?
- Was there a **clear next step**?

Capstone Overview

Final capstone: Build and use your CTFS AI Sales Teammate. This is not a theoretical exercise — your AI teammate must be useful after the course ends and ready to deploy in real opportunities.

Prepare for Meetings

Generate stakeholder maps and persona-based discovery questions before every call

Create Talk Tracks

Build tailored CTFS messaging aligned to each buyer's priorities and pain points

Handle Objections

Practice objection responses and draft follow-up emails with AI coaching support

Build Summaries

Generate executive summaries and receive post-call coaching after simulated sales calls

CTFS AI Sales Teammate — Required Outputs

Your AI teammate must produce eight specific deliverables. **Success standard: The tool must be useful after the course.**

1	2
Stakeholder Map Identify all key players and their priorities	Persona Value Messages Tailored messaging for each buyer type
3	4
Discovery Question Plan Structured questions to uncover pain	Objection Handling Practice responses to likely pushback
5	6
Demo Story Outline Challenge → Solution → Advantage → Future	Follow-Up Email Buyer-specific post-meeting communication
7	8
Executive Summary Concise business-value narrative for leadership	Post-Call Coaching Feedback on talk track and role-play performance

Core Prompt — CTFS AI Sales Teammate

This is the foundational prompt that activates your AI teammate. Copy it exactly and customize as needed for each account situation.

- ✓ This prompt is the engine. The following slides add the fuel.

Copy-Ready Core Prompt

You are my CTFS AI Sales Teammate.

Your job is to help me sell IQVIA Clinical Trial Financial Suite accurately and effectively.

CTFS helps reduce fragmented, manual clinical trial financial workflows and supports unified, AI-enabled operations across:

- Budgeting and contracting
- Forecasting and site payments
- Participant payments
- Document processing
- Invoice reconciliation
- Anomaly detection
- Global financial operations

Use persona-based messaging and do not invent unsupported claims.

CTFS AI Sales Teammate — Persona Instructions

Continue the core prompt with these persona-specific instructions. Each persona requires a distinct messaging lens aligned to their business priorities.

1. Digital Transformation Leaders

Focus on scalable AI, operational proof points, agentic orchestration, measurable ROI, governance, and lower total cost of ownership

2. Clinical Operations Leaders

Focus on trial execution, visibility, site satisfaction, global scalability, and reduced manual effort across the trial lifecycle

3. IT Leaders

Focus on integration, compliance, API-first architecture, webhooks, audit-ready controls, interoperability, and reduced tech debt

4. Site / Study Operations Leaders

Focus on predictable cash flow, fewer disputes, automated invoices, real-time payment visibility, and lower administrative burden

CTFS AI Sales Teammate — Guardrails

These rules govern how your AI teammate operates. They ensure outputs remain accurate, ethical, and genuinely useful in real sales situations.

Do not invent features

Never claim CTFS capabilities that are unsupported or unverified

Label assumptions clearly

When context is inferred, flag it so the seller can verify

Ask clarifying questions

When account context is missing, prompt for more information

Connect to buyer outcomes

Always link CTFS capabilities to real pain and business results

Stay practical and concise

Outputs must be sales-ready — not academic or overly verbose

Do not replace judgment

AI prepares and coaches — the seller leads the conversation

CTFS AI Sales Teammate — Workflows

When you provide an account situation, your AI teammate generates nine structured outputs to prepare you for every stage of the sales conversation.

Provide as much account context as possible for the most relevant outputs.

Coaching Feedback

Capstone Scenario

A mid-sized sponsor is expanding into more global studies. Four stakeholders each bring a distinct pain point — your task is to address all of them using your CTFS AI Sales Teammate.

Clinical Operations

Complains about payment delays and growing site dissatisfaction across global locations

IT

Concerned about integration complexity and maintaining compliance across systems

Digital Transformation

Wants measurable AI use cases that go beyond pilots and deliver operational proof

Study Operations

Frustrated by manual invoicing processes and constant payment follow-up burden

 Your task: Use your CTFS AI Sales Teammate to prepare and conduct the full sales conversation for this account.

Capstone Deliverables

Submit all eight written deliverables **and** conduct a live 12-minute simulated customer meeting. Both components are required for capstone completion.

Written Deliverables

Live Activity

- ③ Conduct a **12-minute simulated customer meeting** using your prepared materials. Demonstrate that your AI teammate outputs translate into a real, consultative sales conversation.

Evaluators will assess how well your written preparation translates into a live buyer interaction — not just the quality of the documents alone.

Capstone Scoring Rubric

Performance is evaluated across seven dimensions. The distinction between excellent and needs-improvement performance comes down to specificity, accuracy, and buyer relevance.

✓ Excellent Performance

The seller sounds **prepared, relevant, consultative, and accurate** — every statement connects to buyer pain and business outcomes

⚠ Needs Improvement

The seller gives **generic product claims or unsupported statements** that fail to connect CTFS value to the specific buyer's situation

Manager Coaching Guide

Managers should reinforce the course in real opportunities. A structured four-week coaching cadence ensures skills are applied — not just learned.

Manager coaching question: "How did AI help you prepare better than you would have prepared alone?"

Post-Course Reinforcement Plan

30-day focus: Use the CTFS AI Sales Teammate in active opportunities. Five assignments bridge the gap between training and real-world performance.

Record Two Pitches

Deliver two persona-specific CTFS pitches on video for self-review

Prepare Discovery Questions

Build a discovery question set for one real account using your AI teammate

Practice Three Objections

Run three objection-handling role-plays with AI and review the coaching feedback

Draft a Follow-Up Email

Write one persona-specific follow-up email using your AI teammate prompt

Manager Opportunity Review

Review one active opportunity with your manager using your AI-prepared materials

✅ **Final takeaway:** Sell CTFS as a business-value conversation, use AI as your preparation and practice partner, and tailor every conversation to the stakeholder in front of you.
