

An Introduction to the Clinical Trial Financial Suite

Module 1

01

Why trial finance is broken

02

What CTFS is

03

CTFS promise in plain English

04

Core terms you will use

05

How this course progresses

The clinical finance problem today

Module 1

Fragmented, manual processes add cost

Disputes and delays strain sites

Siloed tools block visibility

Global currency, tax, regulations risk

Pilots and legacy tools stall

Why this problem matters

Module 1

Slower trials, missed milestones

Unpredictable site cash flow

Error rates, rework, audit issues

Damaged sponsor-site relationships

Higher operational cost-to-serve

What is CTFS

Module 1

Unified platform: budget to payment

Cloud-native, API-first, agent-ready

Orchestrates end-to-end workflows

Built for speed and transparency

Site-first, global-ready design

CTFS core promise

Module 1

Faster cycles, fewer exceptions

Real-time visibility for sponsors, sites

Lower total cost of ownership

Scales across studies and geographies

Audit-ready controls from day one

CTFS capabilities at a glance

Module 1

- Automates document ingestion, validation
- Maps CTA terms to triggers
- Generates invoices from activity
- Smart approvals with audit trails
- Integrates EDC, CTMS, ERP, banking

How CTFS is different

Module 1

What CTFS is NOT

- Not a point solution
- Not an inflexible legacy platform

What CTFS IS

- Orchestrates multiple AI agents
- Modular SaaS plus TES services
- Global governance and compliance

Key terms: contracts and payments

Module 1

1

CTA, site grant, pass-throughs

2

Milestones, visits, pass-through triggers

3

Rates, country rules, taxes

4

Site Payments module, portal

5

Approvals, SLAs, remittance advice

Key terms: tech and compliance

Module 1

1

APIs, webhooks, orchestration

2

Agentic AI, DeX document extraction

3

Anomaly detection, exception queues

4

GxP, GDPR, HIPAA alignment

5

Role-based access, segregation duties

Practice, job app, quick check

Module 1

01

Match pairs to CTFS capabilities

02

Define five key terms concisely

03

Write two-sentence CTFS description

04

Identify two credible customer outcomes

05

Complete five-question knowledge check

CTFS components and modules

Module 2

Budgeting, contracting,
forecasting, payments

First module: CTFS Site
Payments

Shared data model, audit layer

Configurable rules, no-code
workflow

Dashboards and KPIs transparency

Site Payments module focus

Module 2

Anchor for phased rollouts

Automates trigger-to-payment flow

Handles multi-currency, tax treatment

Portal enables site transparency

Supports insourced and hybrid models

Shared data and audit layer

Module 2

Single source for financial terms

Standardized triggers and milestones

Centralized approvals and histories

Immutable, audit-ready event trails

Explainability across decisions

Configuration and no-code workflow

Module 2

Business rules configurable

No-code routing and approvals

SLA and cycle-time tracking

Reusable templates per study

Dashboards for role-based views

Architecture essentials

Module 2

- Cloud-native, API-first platform
- Extensible to third-party agents
- Traceability and explainability embedded
- Webhook orchestration across agents
- Cross-agent reconciliation automation

Key integrations

Module 2

EDC, CTMS for activity triggers

ERP, GL for accruals, postings

Banking rails for payment execution

Identity providers for access control

Analytics exports for reporting

Global readiness and compliance

Module 2

Multilingual, multicurrency capabilities

Country-specific tax rules applied

GxP, GDPR, HIPAA alignment

Centralized audits and approvals

Segregation of duties enforced

Operating and deployment models

Module 2

Insourced, outsourced, hybrid options

Modular SaaS with TES support

Phased rollout by module, region

Governance cadence aligned to KPIs

Lower TCO through consolidation

Practice, job app, assessment

Module 2

01

Place modules on reference diagram

02

Label audit and compliance controls

03

List three likely integration points

04

Note one compliance requirement per geography

05

Choose right module for scenario

Budget-to-payment lifecycle overview

Module 3

1

Budget linked to CTA terms

2

Sites activated with agreed rates

3

Activity captured from EDC, CTMS

4

Triggered invoices created, validated

5

Payments executed, reconciled, forecasted

Budget and CTA Linkage

Module 3 · Slide 21

- 01

DeX extracts key financial terms
- 02

Terms standardized into data model
- 03

Triggers mapped to operational events
- 04

Rates aligned to geographies
- 05

Traceability back to contract clauses

Site Activation and Milestones

Module 3 • Slide 22

01

Sites onboarded to portal

03

Pass-through items cataloged

05

Baseline forecast created

02

Milestones and visit schedules set

04

Country taxes, currencies configured

Activity Capture from Systems

Module 3 • Slide 23

01

EDC events drive visit triggers

02

CTMS statuses confirm milestones

03

Data validations applied on ingest

04

Exceptions routed for quick review

05

Audit logs created automatically

Trigger-Based Invoice Creation

Module 3 • Slide 24

01

Verified activity generates invoices

03

Line items transparent for sites

05

SLA timers start immediately

02

Terms and rates applied automatically

04

Drafts routed to approvers

Ingestion and Validation with DeX

Module 3 · Slide 25

- 01

CTAs and invoices ingested automatically
- 02

Key fields extracted and normalized
- 03

Terms mapped to trigger catalog
- 04

Confidence thresholds drive reviews
- 05

Learning governed with controls

Anomaly Detection and Exceptions

Module 3 • Slide 26

Out-of-policy items
flagged

Duplicate or missing
visits identified

Rate mismatches
highlighted early

Exception queues
prioritized intelligently

Root-cause notes captured

Smart Approvals and Auditability

Module 3 • Slide 27

Multi-level routing based on rules

Delegation and substitutions supported

Every decision stamped and traceable

SLA breaches escalated automatically

Approvals visible to stakeholders

Payment Execution

Module 3 · Slide 28

01

Multi-currency payments initiated

03

Remittance advice sent to sites

05

Reversals managed via exceptions

02

Banking integrations handle rails

04

Payment status updated in portal

Tax and ERP Reconciliation

Module 3 · Slide 29

**Country tax treatment
applied**

**ERP updated for
accruals, postings**

**Currency conversions
logged transparently**

**Reconciliation
exceptions resolved
quickly**

**Forecast refreshed post-
payment**

Site Portal Experience

Module 3 • Slide 30

Sponsor-agnostic portal access

Real-time payment tracking available

Transparent line-item visibility reduces disputes

Standardized communications and documents

Consistent experiences across sponsors

Forecasting and Exception Management

Module 3 • Slide 31

Rolling forecasts
updated by actuals

Exception trends
analyzed for patterns

KPI dashboards for
ClinOps, Finance

Playbooks guide high-
volume anomalies

Continuous improvement loops executed

Practice and Job Application

Module 3 · Slide 32

- 1 Sequence ten steps correctly
- 2 Explain two pre-approval dependencies
- 3 Draft narrative on cycle reduction
- 4 Focus on spreadsheet-driven sponsor
- 5 Individual, timed exercise

Assessment: Scenario-Based Workflow

Module 3 • Slide 33

01

Review brief CTA excerpt

02

Interpret sample site activity

03

Choose correct trigger and approvals

04

Select proper payment handling

05

Submit scenario decisions

Stakeholder Personas and Approach

Module 4 • Slide 34

Tailor CTFS value by persona

Link pains to capabilities

Use workflow language from Module 3

Baseline relevant KPIs early

Align to decision drivers

ClinOps Director Value

Module 4 · Slide 35

End-to-end visibility and automation

Site-first transparency, satisfaction focus

Multi-country readiness, delivery speed

Fewer disputes, faster cycle times

Modular capabilities, scalable operations

IT VP Clinical Value

Module 4 • Slide 36

**Interoperable, secure,
API-first platform**

**GxP, GDPR, HIPAA
alignment ensured**

**Extensibility reduces
tech debt**

**Standards-based EDC,
CTMS, ERP**

Lower TCO, faster deployments

Digital Transformation Leader Value

Module 4 · Slide 37

**Measurable ROI beyond
pilots**

**Orchestrated agentic AI
workflows**

**Explainability and
governance required**

**Enterprise KPIs for
digital ROI**

Open architecture with partners

Site Operations Leader Value

Module 4 · Slide 38

**Predictable cash flow
priority**

**Automated, accurate
invoicing delivery**

**Sponsor-agnostic,
intuitive portal**

**Multicurrency, local tax
handling**

**Consistent experiences
across sponsors**

Decision Drivers and KPIs

Module 4 · Slide 39

**Unified suite versus
point tools**

**API and webhook
extensibility**

**Global readiness,
compliance posture**

**Speed to value, change
impact**

Track payments, disputes, forecasts

Practice and Job Application

Module 4 · Slide 40

- 1 Pick pains and matching capabilities
- 2 Write one baseline KPI per persona
- 3 Draft five discovery questions each
- 4 Focus on integrations and KPIs
- 5 Individual, timed activity

Assessment: persona alignment

Module 4

01

Select best value statements

02

Justify choices briefly

03

Ensure persona-capability fit

04

Submit responses for review

05

Proceed to next module

Implementation approach

Module 5

01

Start with Site Payments anchor

03

Prepare CTA ingestion readiness

05

Plan training, cutover, hypercare

02

Plan EDC, CTMS, ERP integrations

04

Complete security and compliance review

Adoption and change management

Module 5

Choose insourced or hybrid model

Onboard sites through the portal

Establish governance cadence, dashboards

Use exception, reconciliation playbooks

Align roadmap to improvements

Risk management essentials

Module 5

Data quality, source alignment

Integration delays and fallbacks

Change resistance, role clarity

Regulatory audit readiness maintained

AI explainability, controlled updates

Competitive positioning

Module 5

Greenphire

Point tool versus suite

Medidata

Flexibility and openness
advantage

Standalone agents

Orchestration and scale

IQVIA ecosystem and TES

Leverage IQVIA ecosystem and
TES

Lower TCO

Lower TCO through consolidation

Objection handling themes

Module 5

- We already have payments tool
- AI risk for compliance
- Sites will not adopt portal
- Our ERP cannot integrate
- Global taxes, currencies too complex

Practice: discovery to recommendation
