

Building Digital Teammates for Sales

MODULE 1

A practical AI-powered course for IQVIA sales professionals. Learners will master how to build digital teammates that accelerate performance, shorten ramp time, and drive measurable business results.

Shorter Ramp Time

Get new reps productive faster with AI-assisted onboarding

Faster Time to Market

Move from insight to action with AI as your working partner

More Sales

Equip every rep with a tireless AI coach and research partner

Larger Pipeline

Scale outreach and preparation without scaling headcount

Why This Skill Matters Now

Inconsistent sales preparation and execution carries a real cost — in lost deals, longer ramp times, and missed quotas. For IQVIA teams, the stakes are high across every role.

The Real Workplace Cost

- Reps spend hours on prep that AI could handle in minutes
- Inconsistent messaging erodes buyer trust
- New hires take months to reach full productivity
- Managers repeat coaching instead of scaling it

Who This Affects at IQVIA

Sales Reps

Need faster prep and sharper messaging for complex healthcare accounts

Sales Managers

Need scalable coaching tools that don't require constant 1:1 time

Customer Service Personnel

Need consistent, accurate responses under pressure

New IQVIA Personnel

Need structured onboarding support from day one

What Changes When AI Becomes a Working Partner

AI is not a replacement for human judgment — it is a force multiplier. When positioned correctly, AI transforms how sales professionals prepare, practice, and perform.

Coach

Provides real-time feedback on your approach, messaging, and strategy — available 24/7 without scheduling a meeting.

Teammate

Collaborates on drafts, plans, and proposals — a tireless partner who never runs out of ideas or energy.

Role-Play Partner

Simulates realistic buyer objections, stakeholder pushback, and difficult conversations so you can practice safely.

Research Assistant

Synthesizes market data, account intelligence, and competitive insights faster than any manual process.

Planning Partner

Helps structure territory plans, call strategies, and account approaches with structured thinking support.

Feedback Partner

Reviews your work against quality standards and suggests specific, actionable improvements before you submit.

The Core Workflow

Every effective AI-assisted sales task follows a simple, repeatable five-step workflow. Master this loop and you can apply it to any sales challenge — from prospecting to closing.

1. Prepare

Define your goal, gather context, and set up your AI prompt with the right role and constraints

2. Act

Execute the task with AI as your active partner — draft, simulate, or research together

3. Review

Evaluate the AI output critically — check for accuracy, tone, relevance, and business alignment

4. Improve

Refine your prompt or approach based on what the review reveals — iterate until the output is strong

5. Transfer

Apply the final output to your real job — and capture what worked for future use

This workflow is the backbone of every exercise, scenario, and assessment in this course. Return to it whenever you feel stuck.

Strong vs. Weak Example

Compare these two approaches to building a digital sales teammate. Identify the specific behaviors that make the stronger version work — and why the weaker version falls short.

WEAK APPROACH

Vague Prompt, No Context

"Help me with my sales call tomorrow."

- No role assigned to the AI
- No account context or buyer information provided
- No specific goal or desired output defined
- No constraints or tone guidance given
- Result: Generic, unusable output that wastes time

Specific Prompt, Rich Context

"Act as a senior IQVIA sales coach. I have a 30-minute discovery call with a hospital CFO focused on cost reduction. Ask me three questions to stress-test my opening, then suggest improvements."

- Clear role assigned to the AI
- Specific buyer persona and context provided
- Defined task with measurable output
- Time constraint creates realistic pressure
- Result: Targeted coaching that sharpens real skills

 Source: Teammate Builder Prompt.docx — Use this comparison as a reference when building your own AI prompts throughout the course.

Practical AI Prompt

Use this prompt template to activate AI as your personal sales coach. Copy it, customize it for your context, and begin a coaching conversation that challenges your thinking one step at a time.

"Act as a practical coach for building digital teammates for sales. Ask me one question at a time, review my answer, and suggest a stronger next move."

Why This Prompt Works

1 One Question at a Time

Prevents overwhelm and forces focused, deliberate thinking rather than surface-level responses

2 Review My Answer

Creates a feedback loop — AI evaluates your reasoning before moving forward, just like a real coach

3 Suggest a Stronger Next Move

Keeps the conversation action-oriented and tied to real sales outcomes, not just theory

How to Customize It

Add Your Role

"I am an IQVIA sales rep focused on hospital systems in the Southeast region."

Add Your Goal

"My goal is to prepare for a renewal conversation with a skeptical procurement lead."

Add a Constraint

"I have 15 minutes before the call. Focus on the three most critical points."

Real-World Scenario

Apply your skills under realistic conditions. This scenario mirrors the pressure, ambiguity, and business stakes you face in actual IQVIA sales situations.

 Scenario Conditions: Limited time · Incomplete information · Clear business goal

1

The Situation

You have 20 minutes before a call with a new stakeholder at a large health system. Your usual contact is unavailable. You know the account is evaluating a competitor and the CFO is focused on cost reduction this quarter.

2

Your Task

Use AI to rapidly build a digital teammate that helps you prepare a compelling opening, anticipate the top three objections, and identify one differentiating value point specific to this buyer's priorities.

3

The Business Goal

Secure a follow-up meeting and keep the deal alive. Your output must be ready to use — not just a plan, but actual talking points and a fallback strategy if the conversation goes off-script.

 Source: Teammate Builder Prompt.docx — This scenario is designed to surface the gap between knowing the workflow and executing it under pressure.

Guided Practice

Learning happens through doing. Complete this structured practice task, use AI to get feedback on your work, then revise your approach based on what you learn.

This practice loop mirrors how top performers use AI in the real world — not as a shortcut, but as a thinking partner that accelerates deliberate improvement.

Your Practice Task

Write a 3-sentence AI prompt that builds a digital teammate for one of your current sales challenges. Include: the AI's role, your specific context, and the output you need.

Time limit: 10 minutes. Don't overthink it — a rough first draft is the starting point, not the finish line.

Feedback Prompt to Use

"Review my prompt below. Score it on clarity, context, and specificity. Then rewrite it to make it 50% stronger."

After Revision, Ask Yourself:

- What did the AI catch that I missed?
- What would I do differently next time?
- How does this connect to a real task this week?

Role-Play Round

The best way to prepare for difficult conversations is to practice them. Use AI as a realistic counterpart who pushes back with believable objections and real-world constraints — so you're ready when it counts.

The Setup Prompt

"Act as a skeptical hospital procurement director evaluating IQVIA against a lower-cost competitor. Respond with realistic objections and budget constraints. Do not make it easy for me."

Common Objections to Practice

- "Your pricing is 20% higher than the alternative."
- "We've worked with your competitor before and it was fine."
- "I need to see ROI data specific to our patient population."
- "Our IT team says integration will take 6 months."

Debrief Questions

- Which objection caught you off guard?
- Where did your response feel weak?
- What would you say differently in a real call?
- How did AI's pushback compare to real buyer behavior?

✅ Pro tip: After each role-play round, ask AI to score your responses on confidence, specificity, and business relevance — then run the scenario again with your improved answers.

📄 Source: Teammate Builder Prompt.docx

Debrief and Coaching

After every practice session, use this five-point rubric to evaluate your AI-assisted work. Honest self-assessment is what separates learners who improve from those who repeat the same mistakes.

Clarity

Is the message immediately understandable to the buyer? No jargon, no ambiguity.

Relevance

Does the content speak directly to this buyer's specific situation and priorities?

Business Value

Is there a clear, quantifiable benefit tied to the buyer's business goals?

Human Judgment

Has a human reviewed and validated the AI output before it reaches the buyer?

Next Action

Does the output drive a clear, specific next step that moves the deal forward?

③ Use this rubric after every practice task, role-play, and assessment submission. Score yourself honestly — then identify the one dimension where you will focus your next improvement effort.

AI Teammate Build

Now it's your turn to build. Write a complete set of instructions for an AI teammate that supports your sales work before, during, and after every customer interaction.

Before the Work

1

Instruct your AI teammate to help you research the account, anticipate objections, prepare your opening, and structure your agenda. Define what inputs it needs from you.

2

During the Work

Instruct your AI teammate to serve as a real-time thinking partner — suggesting pivots, generating alternative framings, and keeping you anchored to the buyer's stated priorities.

3

After the Work

Instruct your AI teammate to help you debrief the interaction, capture key insights, draft follow-up communications, and identify what to do differently next time.

Your Build Prompt

"You are my dedicated sales AI teammate. Your job is to help me prepare, execute, and improve every customer interaction. Here are your standing instructions..."

Write at least 5 specific instructions that reflect your real sales context at IQVIA.

Quality Checklist for Your Build

- Does it have a clear role and persona?
- Does it know your product, market, and buyer types?
- Does it know when to push back on your thinking?
- Does it know what "good output" looks like for you?
- Does it know your preferred communication style?

Checklist: Your AI-Assisted Sales Workflow

Use this job aid every time you apply the AI-assisted workflow to a real sales task. Print it, save it, or keep it open alongside your AI tool of choice.

Before You Start

- ☐ Define the specific goal of this task
- ☐ Identify the buyer, stakeholder, or audience
- ☐ Gather relevant context (account history, priorities, constraints)
- ☐ Choose the right AI role for this task (coach, researcher, role-play partner)
- ☐ Write a specific, context-rich prompt — not a vague request

During the Task

- ☐ Run your prompt and review the initial output critically
- ☐ Check for accuracy — do not assume AI facts are correct
- ☐ Refine your prompt if the output misses the mark
- ☐ Use the five-point rubric: clarity, relevance, value, judgment, next action

After the Task

- ☐ Apply human judgment before using any AI output with a real buyer
- ☐ Adjust tone and language to match your authentic voice
- ☐ Save your best prompts for reuse in similar situations
- ☐ Capture one thing you would do differently next time

Quality Gates

 Never send AI-generated content to a buyer without human review

 Always tie AI output to a specific business outcome or next action

 When in doubt, ask AI to critique its own output before you use it

Case Study

A high-performing IQVIA sales team faces a critical challenge: they need to dramatically improve their digital teammate-building capability — without sacrificing the quality, trust, and business outcomes their accounts depend on.

The Challenge

The team has started using AI tools inconsistently. Some reps produce sharp, buyer-ready outputs. Others generate generic content that damages credibility. Managers lack a standard for what "good" looks like, and there is no shared workflow or quality gate in place.

The Stakes

Three major renewals are at risk. Buyer trust is fragile. The team has 30 days to demonstrate a measurable improvement in the quality and consistency of their AI-assisted sales preparation — or leadership will restrict AI tool access entirely.

Your Task

Using the Teammate Builder framework, design a team-level AI workflow that standardizes preparation, builds in quality review, and protects buyer trust. Define the roles, the prompts, the checkpoints, and the success measures.

🔍 Discussion: What is the single biggest risk if this team continues without a standard workflow? What would you fix first?

📄 Source: Teammate Builder Prompt.docx

Group Activity

Small groups will compare three AI-assisted approaches to the same sales challenge. Your task: choose the strongest option, defend your choice, and explain exactly why the others fall short.

Approach A Rep uses a single generic prompt to generate a full account plan. Reviews it once, makes minor edits, and sends it to the buyer. Fast, but no customization or quality gate applied.	Approach B Rep uses a structured Teammate Builder prompt with full account context. Runs a role-play to stress-test the plan. Applies the five-point rubric before finalizing. Takes 25 minutes total.	Approach C Rep uses AI for research only, then writes the entire plan manually. Spends 90 minutes on preparation. High quality but not scalable across a full territory of 40+ accounts.
---	--	--

Group Discussion Questions

- Which approach best balances speed, quality, and buyer trust?
- What specific behaviors make the strongest approach work?
- How would you adapt the winning approach for your own territory?
- What would you add or remove to make it even stronger?

Debrief Format

01

Groups share their choice (2 min each)

02

Facilitator highlights key differences

03

Full group agrees on a combined best practice

 Source: Teammate Builder Prompt.docx

Assessment Task

This is your opportunity to demonstrate mastery. Complete a realistic sales task using the AI-assisted workflow — and submit both your final output and the AI prompts you used to produce it.

Choose Your Task

Select a real or realistic sales challenge: an account plan, a discovery call prep, a proposal outline, or a stakeholder communication. It must be specific to an actual IQVIA context.

Build Your Digital Teammate

Write and run at least three AI prompts using the Teammate Builder framework. Document each prompt and the output it produced. Show your iteration — not just the final version.

Apply the Rubric

Score your final output against all five dimensions: clarity, relevance, business value, human judgment, and next action. Include your self-assessment scores in your submission.

Submit Your Work

Submit the final output, all prompts used, your rubric scores, and one paragraph explaining what you would do differently if you ran this task again tomorrow.

 Assessment is evaluated on process quality, not just output quality. Showing strong iteration and honest self-assessment matters as much as the final deliverable.

Common Mistakes to Avoid

Even experienced professionals make these errors when first building digital teammates for sales. Recognizing them is the first step to eliminating them from your practice.

1

Generic Prompts

"Help me with sales" tells AI nothing useful. Every prompt must include a specific role, context, goal, and constraint. Vague inputs produce vague outputs — every time.

2

Unsupported Facts

AI can confidently state things that are wrong. Never use statistics, product claims, or competitive data from AI output without verifying against authoritative IQVIA sources first.

3

Tone Mismatch

AI defaults to a generic professional tone. Your buyer knows your voice. Always edit AI output to sound like you — not like a press release or a chatbot response.

4

Weak Context

AI cannot read your mind or your CRM. If you don't tell it about the buyer's priorities, history, and constraints, it will invent plausible-sounding but irrelevant content.

5

Skipping Human Review

The most dangerous mistake. AI output sent directly to a buyer — without a human quality check — risks factual errors, tone problems, and trust damage that is hard to repair.

⊗ Rule of thumb: If you wouldn't sign your name to it without reading it carefully, don't send it. AI is a first draft, not a final product.

Quality Standards

Good AI-assisted work is not just fast — it is accurate, relevant, and buyer-ready. Use these standards to define what "done" really means before any AI output leaves your hands.

What Good Work Looks Like

- **Buyer-specific:** References this buyer's actual priorities, not generic industry trends
- **Factually verified:** Every claim has been checked against a reliable source
- **Authentically voiced:** Sounds like you, not like a template
- **Action-oriented:** Drives a clear next step, not just information delivery
- **Appropriately concise:** Respects the buyer's time — no padding, no filler

How to Check AI Output Before Use

01

Read it aloud

If it sounds robotic or generic when spoken, it will feel that way to the buyer too

02

Verify every fact

Cross-reference statistics, product claims, and competitive statements against IQVIA-approved sources

03

Apply the rubric

Score against all five dimensions before finalizing — clarity, relevance, value, judgment, next action

04

Ask AI to critique it

"What are the three weakest parts of this output and how would you improve them?"

Transfer to Daily Work

Learning that stays in the classroom doesn't move the needle. Choose one real task this week where you will apply the AI-assisted workflow — and commit to it now, before you leave this session.

Account Preparation

Use AI to research a key account, anticipate objections, and build a structured call plan before your next customer meeting

Proposal Drafting

Use AI as a writing partner to draft a first version of a proposal or executive summary, then apply the quality rubric before sending

Objection Practice

Run a 15-minute AI role-play before a high-stakes call to stress-test your responses to the toughest objections you expect

Follow-Up Communication

Use AI to draft a post-meeting follow-up that captures commitments, reinforces value, and drives the next step — then edit for your voice

✔ Your commitment: Write down the specific task, the day you will do it, and the AI prompt you will use. Share it with a colleague or manager for accountability.

My Transfer Commitment

Task I will apply this to: _____

Day I will do it: _____

AI role I will assign: _____

Success Looks Like

- I used the full Prepare → Act → Review → Improve → Transfer workflow
- I applied the five-point rubric before using the output
- The output was buyer-ready without major manual rework
- I saved the prompt for reuse in similar situations

Your 30-Day Action Plan

Sustainable skill development requires a structured plan. Use this framework to build consistent AI practice into your daily sales workflow over the next 30 days — and measure your progress along the way.

Week 1: Foundation

Apply the Teammate Builder workflow to at least two real tasks. Focus on writing strong prompts with full context. Save every prompt you use.

Week 3: Refinement

Review your saved prompts and identify your top three. Refine them based on what worked. Begin building your personal AI teammate instruction set.

Week 2: Practice

Run one AI role-play before every high-stakes call. Use the five-point rubric on all AI output. Share one prompt with a colleague and get their feedback.

Week 4: Integration

AI-assisted preparation is now your default workflow. Measure time saved, output quality improvement, and one business outcome you can attribute to the practice.

Success Measures

3+

AI tasks per week

Minimum practice frequency to build lasting habit

5

Saved prompts

Build a personal library of reusable, high-quality prompts

1

Business win

Identify one deal or outcome improved by AI-assisted preparation

30-Day Reflection Questions

- Which AI role (coach, researcher, role-play partner) added the most value for me?
- Where did I still default to old habits instead of using the workflow?
- What is the one prompt I would recommend to every colleague on my team?
- What is my next skill to develop in AI-assisted selling?

Final Toolkit Review

You have built a complete AI-assisted sales toolkit. Before you leave, review each component — make sure it is ready to use in the real world, not just in a training environment.

Your AI Prompts

Review your saved prompts. Are they specific, context-rich, and reusable? Do they cover preparation, role-play, research, and feedback? Refine any that feel generic.

Your Checklist

Is your job aid complete and practical? Can you use it in under 2 minutes before a real task? Does it include your quality gates and the five-point rubric?

Your Role-Play Partner

Do you have a saved prompt that activates a realistic buyer counterpart? Have you tested it against your toughest objections? Is it ready to use before your next high-stakes call?

Your Improvement Plan

Is your 30-day plan specific and measurable? Do you have a practice schedule, success measures, and a reflection date on your calendar? Have you shared it with your manager?

"The goal is not to use AI more. The goal is to sell better, serve buyers more effectively, and grow your business faster — with AI as the partner that makes it possible."

Your Next Step

Apply the workflow to one real task within 48 hours of completing this course. The habit starts now — not next week.

Share What Works

Share your best prompt with your team. The fastest way to build a high-performing AI culture is to make your best thinking available to everyone.

Measure and Report

Track one business outcome you can attribute to AI-assisted preparation. Bring that data to your next team meeting and make the case for scaling the practice.
