

Connecting Business Goals to People Solutions

Using AI to Operationalize HR Strategy at Global Scale

A course for HR leaders, HRBPs, talent leaders, people analytics leaders, and workforce transformation leaders — built around one core promise: **turn business goals into scalable people solutions with AI as a working partner.**

Why This Course Exists

Business leaders regularly ask HR to support the goals that drive the organization forward. The challenge is translating those goals into practical, measurable people actions.

Growth

Productivity

Innovation

Cost Management

Customer Experience

Retention

Leadership Capability

Workforce Agility

These goals must become **practical people actions** — and that translation is exactly what this course teaches.

The HR Strategy Execution Gap

Common Problem

The business goal is clear — but the people plan is vague. This gap between strategy and execution is where HR value is lost.

The result: effort without impact, programs without outcomes, and stakeholders who lose confidence in HR's ability to deliver.

Typical Symptoms

- HR programs not tied to business outcomes
- Weak stakeholder alignment
- Unclear ownership across teams
- Slow execution and missed timelines
- Inconsistent global rollout
- Poor measurement and accountability

Course Focus: Close the gap between business strategy and people execution — with AI as your accelerator.

The Strategy-to-People Value Chain

This chain is the backbone of the entire course. Every module, tool, and AI prompt maps back to one or more steps in this sequence. Use it as your navigation system throughout.

Each arrow in this chain represents a decision point where AI can help you think more clearly, move faster, and pressure-test your assumptions before presenting to stakeholders.

AI's Role in This Course

AI is not a replacement for HR judgment — it is a force multiplier. Throughout this course, AI plays eight distinct roles to help you work smarter at every stage of the strategy-to-execution journey.

Strategic Thinking Partner

Helps you frame problems and explore implications

Research Assistant

Synthesizes information and surfaces relevant insights

Scenario Simulator

Models different outcomes and stress-tests plans

Implementation Coach

Guides execution planning and change management

Planning Assistant

Structures roadmaps, timelines, and workplans

People Analytics Partner

Supports data interpretation and storytelling

Communication Partner

Drafts stakeholder messages and executive summaries

Workflow Accelerator

Automates repetitive tasks and speeds up delivery

AI supports judgment. It does not replace it.

What Learners Will Build

Final Project

AI-Powered People Strategy Operating System

By the end of this course, every learner will have constructed a complete, ready-to-use operating system for connecting business goals to people solutions. Here is what it includes:

01

Business Goal Summary

A clear articulation of the business priority and its people implications

02

People Implications Map

A structured view of how the goal affects the workforce

03

Gap Diagnosis

Evidence-based identification of capability and workforce gaps

04

Recommended People Solution

A designed HR intervention tied directly to business outcomes

05

Stakeholder Map

Identification of key players, their interests, and engagement approach

06

Global Scaling Plan

A regionally adapted rollout strategy

01

AI Prompt Library

A curated set of prompts for every stage of the process

02

Implementation Roadmap

A phased plan with milestones, owners, and dependencies

03

Communication Plan

Stakeholder-specific messaging and change narrative

04

Measurement Dashboard

KPIs, leading indicators, and reporting cadence

05

Continuous Improvement Workflow

A system for learning, adapting, and sustaining impact over time

The Working Case Example

Business Priority

Improve productivity while preparing for growth in three global regions. This case runs throughout the course as a shared reference point — but learners may also apply every tool and framework to their own real business priority.

Reduce Operating Friction

Identify and remove the processes, structures, and behaviors that slow the organization down and create unnecessary cost.

Improve Leadership Consistency

Ensure leaders across all three regions are aligned on expectations, behaviors, and ways of working — not just strategy.

Build Critical Capabilities

Identify the skills and capabilities the business needs to grow, and close the gaps before they become a constraint.

Protect Employee Experience

Ensure that the drive for productivity does not come at the cost of engagement, wellbeing, or trust.

Scale Without One-Size-Fits-All

Recognize that what works in one region may not work in another — and build that flexibility into every people solution.

Responsible AI Ground Rules

AI is a powerful tool — and like all powerful tools, it requires discipline. These ground rules apply throughout the course and in your real-world practice.

- 1 Protect Confidential Data**
Do not enter confidential employee data into unapproved AI tools. Know your organization's data governance policies before you begin.
- 2 Review for Accuracy**
AI outputs can be plausible but wrong. Always review, verify, and validate before using any AI-generated content in decisions or communications.
- 3 Check for Bias and Missing Context**
AI reflects the data it was trained on. Actively look for gaps, assumptions, and perspectives that may be missing from the output.
- 4 Validate with Evidence**
Ground AI-generated insights in real data, stakeholder input, and organizational context before acting on them.
- 5 Involve the Right Partners**
Bring in legal, privacy, compliance, and employee relations partners whenever AI use touches sensitive workforce decisions.

Treat AI as a draft partner, not the decision-maker. Final judgment always belongs to the human professional.

The Core Question for Every Module

At the end of each module, pause and ask yourself this single question:

"What can I now do better with AI than I could do before?"

This question keeps the learning grounded in practical capability — not just conceptual understanding. The expected answer evolves as you move through the course:

Move Faster

Compress the time from business goal to people plan without sacrificing quality

Think More Clearly

Use AI to structure complex problems and surface implications you might have missed

Pressure-Test Assumptions

Challenge your own thinking before presenting to stakeholders

Communicate Better

Craft stakeholder messages that are clearer, more compelling, and better tailored

Execute Stronger

Build implementation tools that are more rigorous, complete, and actionable

Course Roadmap

Six modules. One integrated system. Each module builds on the last — moving you from reading business strategy all the way through to measuring impact and sustaining results at scale.

Module 1: Read Business Strategy Through a People Lens

Learn to decode what business goals actually mean for the workforce — before jumping to solutions.

Module 2: Diagnose the People Gaps That Matter Most

Use AI to identify capability, culture, and workforce gaps that are most critical to business performance.

Module 3: Design People Solutions That Support Business Outcomes

Build HR interventions that are directly connected to the business goal — not just best practice for its own sake.

Module 4: Operationalize the Solution with AI

Turn the people solution into a working operating plan with AI-powered tools, prompts, and workflows.

Module 5: Scale People Solutions Globally

Adapt and deploy the solution across regions — respecting local context while maintaining strategic coherence.

Module 6: Measure Impact and Build the Operating System

Define success, track outcomes, and build the continuous improvement system that sustains results over time.

✓ By the end of Module 6, you will have a complete **AI-Powered People Strategy Operating System** — ready to apply to any business priority, in any region, at any scale.

Module 1 — Reading Business Strategy Through a People Lens

Business question: What does this business goal require from people, leaders, teams, and culture?

Learner Output

People Implications Map

AI Advantage

Use AI to translate business priorities into people implications and sharper executive questions.

Lesson Summary

HR strategy starts with business strategy.

✗ Wrong Question

"What HR program should we launch?"

✓ Right Question

"What must people, leaders, teams, and the organization do differently for this business goal to succeed?"

Business Goals Have People Requirements

Every enterprise goal creates people implications. The HR value is in making these implications **visible**.

Example: Growth may require...

- New leadership capacity
- Faster hiring
- Market-specific skills
- Stronger onboarding
- New sales capability
- Local cultural knowledge
- Clear decision rights

People Implications Map

Use **six lenses** to translate any business goal into actionable people implications.

1. Workforce

Who and how many are needed?

2. Skills

What capabilities must exist?

3. Leadership

What must leaders do differently?

4. Culture

What behaviors must become normal?

5. Organization

What structure or decision rights must change?

6. Employee Experience

What will employees need to adopt or sustain?

Business Scenario

"We need to expand into three regional markets while improving efficiency. We need speed, local relevance, and cost discipline."

— The CEO

⚠️ **Your task:** Translate this goal into people implications *before* recommending any HR solution.

Speed

Rapid hiring, onboarding, and capability deployment

Local Relevance

Market-specific skills and cultural knowledge

Cost Discipline

Efficient structures and clear decision rights

AI Workflow — Business Goal to People Implications

A structured seven-step process to move from a business goal to a complete people implications map.

Clarify the business goal

Identify expected business outcomes

Map affected workforce groups

Identify required skills and capabilities

Map leadership and culture requirements

Identify risks and assumptions

Use AI to pressure-test the map

A photograph of a dark-colored laptop on a desk. The laptop screen is white and displays the text "Enter your prompt here". To the right of the laptop is a mouse and a notebook. The background is a blurred office setting.

AI Prompt — Translate the Business Goal

Use this prompt to generate a comprehensive people implications analysis from any business goal.

Act as a senior HR strategy partner. Analyze this business goal: [insert goal].

Translate it into people implications across workforce, skills, leadership, culture, organization design, talent movement, manager capability, employee experience, and risk.

Return:

- Business goal summary
- People implications
- Strategic HR questions
- Risks if ignored
- Suggested HR focus areas

✅ **Pro tip:** The more specific your business goal input, the sharper and more actionable the AI output will be.

AI Prompt — Executive Question Builder

Use this prompt to prepare sharp, business-focused questions before any executive conversation.

The Prompt

Act as an HR business partner
preparing for a discussion with
a senior executive.

Business priority: [insert priority]

Create 10 sharp questions
that clarify:

Questions Must Cover

Success measures

Workforce
requirements

Leadership
expectations

Timing

Risks & trade-offs

Regional differences

📌 Make questions **business-focused**, not HR-process-focused.

Stakeholder Simulation — CEO Strategy Conversation

YOUR ROLE

Senior HR Partner

Stakeholder: CEO or enterprise president

"We need to grow in new markets without adding too much cost. I need HR to help us move faster."
— CEO

i Your task: Ask strategic questions and identify the people implications.

SUCCESS CRITERIA

You succeed when you...

- Clarify the business goal**
Dig into what "faster" and "new markets" actually mean in measurable terms.
- Avoid jumping to programs**
Resist the urge to recommend training, hiring, or restructuring immediately.
- Identify implications**
Surface workforce, leadership, culture, and capability requirements.

Application Activity — Build Your People Implications Map

Choose one business priority and complete the full map below. This is your core deliverable for Module 1.

Business Goal & Expected Outcome

State the goal clearly and define what success looks like in business terms.

Workforce Groups & Required Capabilities

Who is affected? What skills and capabilities must exist or be built?

Leadership Behaviors & Culture Shifts

What must leaders do differently? What new behaviors must become normal?

Organization Barriers & Employee Experience Risks

What structural or decision-rights issues exist? What will employees struggle to adopt?

Assumptions to Validate

What are you assuming that needs to be tested before moving forward?

Measurable outcome: You can turn a broad business goal into a clear, structured people implications map ready for executive discussion.

Module 2 – Diagnosing the People Gaps That Matter Most

Business question: Which people gaps are most likely to block the business goal?

Learner Output

Workforce and capability gap diagnosis

AI Advantage

Use AI to generate hypotheses, structure diagnostics, and prioritize gaps with greater speed and rigor.

Lesson Summary

Do not diagnose everything. Diagnose the people gaps most likely to affect the business outcome.

The goal is precision — not comprehensiveness. A focused diagnosis creates strategic clarity and earns stakeholder trust by connecting HR insight directly to business outcomes.

What Counts as a People Gap?

People gaps span a wide range of workforce and organizational dimensions. Recognizing the full landscape helps you avoid missing critical blockers.

Workforce Capacity

Insufficient headcount or bandwidth to deliver

Skills & Capability

Missing technical or behavioral competencies

Leadership Readiness

Leaders unprepared for current demands

Manager Consistency

Uneven quality of people management

Role Clarity

Ambiguous responsibilities slowing execution

Retention Risk

High attrition in critical talent segments

Engagement Risk

Productivity Friction

Culture Barriers

Decision-Making Delays

Talent Mobility Constraints

People Strategy Diagnostic Framework

Use four structured questions to move from observation to prioritized insight. Avoid unsupported conclusions at every step.

1

Outcome

What business result is at risk?

2

Workforce

Which groups most affect the result?

3

Gap

What people issue may be blocking progress?

4

Evidence

What data or signals support this view?

⚠️ Avoid unsupported conclusions. Every gap identified must be tied to observable evidence or a clearly stated hypothesis awaiting validation.

Business Scenario

A global customer experience function must **improve service quality while reducing cost**. Use this scenario to practice gap diagnosis.

Current Signals

- High attrition in key regions
- Uneven manager quality across locations
- Employee feedback shows unclear priorities
- Service consistency varies significantly by location

Your Task

Identify the people gaps most likely affecting the business result of improving service quality while reducing cost.

-  Consider which gaps are **causal** versus which are **symptomatic**. Focus your diagnosis on root drivers, not surface signals.

AI Workflow — Diagnostic Planning

Follow this eight-step workflow to structure a rigorous, AI-assisted people gap diagnosis from business outcome to actionable plan.

01

Define the Business Outcome

Anchor the entire diagnostic to a specific, measurable business goal.

03

List Possible People Drivers

Brainstorm the full range of people factors that could be at play.

05

Use AI to Generate Hypotheses

Prompt AI to surface additional causes and patterns you may have missed.

07

Check Privacy, Bias & Data Limits

Validate that your approach is ethical, compliant, and appropriately caveated.

02

Identify Workforce Groups

Determine which employee segments most directly influence the outcome.

04

Identify Available Evidence

Catalogue existing data, signals, and observations you can draw on.

06

Prioritize by Business Impact

Rank gaps based on their likely effect on the business outcome.

08

Create a Focused Diagnostic Plan

Translate priorities into a clear, actionable diagnostic roadmap.

AI Prompt — Diagnostic Hypothesis Generator

Use this structured prompt to generate a comprehensive set of people-related hypotheses tied to your specific business outcome.

Act as a people analytics and HR strategy thought partner.

Business outcome: [insert outcome]

Workforce group: [insert group]

Current signals: [insert known data or observations]

Generate possible people-related causes affecting the outcome.

Include:

- Talent
- Skills
- Leadership
- Workload
- Organization design
- Culture
- Engagement
- Retention
- Incentives
- Operating model factors

For each hypothesis, suggest evidence needed and risks of misinterpretation.

What this prompt does well: It forces structured thinking across all people dimensions and builds in epistemic humility by asking for misinterpretation risks.

Remember: AI-generated hypotheses are starting points, not conclusions. Always validate against real data and organizational context.

AI Prompt — Gap Prioritization Assistant

Once you have a list of candidate gaps, use this prompt to structure prioritization with a senior strategic lens.

Act as a senior workforce transformation advisor.

Review these people gaps: [insert list].

Prioritize them using:

- Business impact
- Urgency
- Ability to influence
- Risk
- Dependency on other changes

Return a table with:

Gap	Business Impact	Evidence Needed	Risk Level	
Recommended Priority	Next Action			

The output table gives you a structured artifact to share with stakeholders — making your prioritization logic transparent and defensible.

Business Impact

How much does this gap affect the outcome?

Urgency

How quickly is this gap causing harm?

Ability to Influence

Can HR realistically move this gap?

Risk

What happens if this gap is ignored?

Dependencies

Does this gap block or unlock other changes?

Stakeholder Simulation — CFO Challenge

The CFO's Challenge

"I see the HR concerns, but which people gaps are actually costing us money or slowing the business down? We cannot fund everything."

Your role: HR Leader

Stakeholder: CFO

Success Criteria

- Connect gaps directly to measurable business impact
- Explain what evidence exists and what is still needed
- Avoid overclaiming — be honest about uncertainty
- Recommend clear priorities with a rationale the CFO can act on

i This simulation tests your ability to translate HR diagnostic thinking into the language of business value — the core skill of a strategic HR leader.

Application Activity — Build a Gap Diagnosis

Using your own business priority, complete this structured diagnostic exercise. Work through each dimension systematically.

1 Business Outcome at Risk Name the specific business result that is threatened.	2 Workforce Groups Involved Identify which employee segments most affect the outcome.	3 Current Evidence or Signals List the data, observations, or feedback you already have.
4 Top Five Possible People Gaps Generate your best hypotheses about what is blocking progress.	5 Evidence Needed Specify what data would confirm or refute each hypothesis.	6 Data Limitations & Privacy Concerns Note gaps in data availability and any compliance considerations.
7 Priority Gaps to Address First Select the gaps with the highest business impact and strongest evidence.		

✔ **Measurable Outcome:** You can prioritize people gaps based on **business value**, not HR activity volume.

Module 3 — Designing People Solutions That Support Business Outcomes

Business question: Which people solution best supports the business outcome?

Learner Output

Recommended people solution and decision rationale

AI Advantage

Use AI to generate options, compare trade-offs, and build executive-ready recommendations.

Lesson Summary

A strong people solution is not a generic HR program. It is a targeted response to real business conditions.

Clear Business Goal

Anchored to a specific, measurable outcome the organization must achieve.

Specific People Gap

Identifies the precise capability, behavior, or structural gap blocking progress.

Practical Execution Context

Designed for the real constraints of timing, resources, and organizational readiness.

Measurable Outcomes

Success is defined in advance with clear indicators of impact.

Stakeholder Realities

Accounts for leader priorities, political dynamics, and change appetite.

Global & Local Constraints

Balances enterprise consistency with regional and cultural adaptation needs.

HR Levers to Consider

Possible people solution levers span the full spectrum of HR capability. **The right answer is often a focused combination.**

Business Scenario

A technology business unit must **accelerate product innovation**. The diagnosis reveals four compounding people challenges.

Slow Decision-Making

Decisions escalate unnecessarily, stalling product cycles.

Unclear Product Ownership

Accountability is diffuse, creating confusion and rework.

Weak Cross-Functional Collaboration

Teams operate in silos, limiting integrated problem-solving.

Uneven Leadership Capability

Leadership quality varies significantly across product teams.

Your task: Design a people solution that improves innovation speed **without launching a generic leadership program**.

Decision Matrix for People Solutions

Every solution option must be evaluated rigorously across ten dimensions. A good recommendation does not just name a solution — it **explains the trade-offs**.

→ **Business Impact**

Does it directly move the business outcome?

→ **Speed to Impact**

How quickly will results be visible?

→ **Cost**

What is the investment required?

→ **Feasibility**

Can the organization realistically execute this?

→ **Scalability**

Can it grow across teams, regions, or functions?

→ **Employee Experience**

How will employees perceive and engage with this?

→ **Leadership Effort**

What is required from leaders to make it work?

→ **Local Adaptation Needs**

What must be customized for regional contexts?

→ **Measurement Clarity**

Can success be tracked with clear metrics?

→ **Risk**

What could go wrong, and how likely is it?

Example – Matching Gap to Solution

Business Need

Improve innovation speed

People Gaps Identified

- Slow decisions
- Unclear ownership
- Weak cross-functional collaboration

Targeted Solution Design

01

Decision Rights Clarification

Define who decides what, at which level, and with what authority.

02

Product Leadership Routines

Establish consistent operating rhythms for product teams.

03

Team Operating Model

Redesign how cross-functional teams are structured and governed.

04

Manager Enablement Toolkit

Equip managers with practical tools to lead product delivery.

05

Performance Goal Alignment

Align individual and team goals to innovation outcomes.

Why it works: It changes **how work gets done**, not just what people know.

AI Workflow — Gap to Solution Design

A structured eight-step AI-assisted workflow transforms a diagnosed people gap into an executive-ready recommendation.

AI Prompt — People Solution Design Partner

Use this structured prompt to generate three solution options with full strategic context:

Act as a senior HR strategy and workforce transformation advisor.

Business goal: [insert goal]

Priority people gaps: [insert gaps]

Constraints: [insert timing, cost, regions, talent,
compliance, or change constraints]

Recommend three possible people solutions.

For each, include:

- Business rationale
- HR levers involved
- Expected impact
- Implementation complexity
- Risks
- Global scaling considerations
- Measures of success

 This prompt is designed to produce executive-ready output — not generic HR recommendations. Customize the constraint field carefully for maximum relevance.

AI Prompt — Decision Matrix Builder

Once you have solution options, use this prompt to build a rigorous comparison and arrive at a defensible recommendation:

Create a decision matrix to compare these people solution options: [insert options].

Evaluate each option against:

- Business impact
- Speed
- Cost
- Feasibility
- Scalability
- Employee experience
- Leadership effort
- Local adaptation needs
- Measurement clarity

Recommend the strongest option and explain trade-offs in executive-ready language.

✓ **What good output looks like:** A clear winner with honest acknowledgment of what is being traded off — not a declaration that one option is perfect.

📌 **Pro tip:** Run this prompt twice with different constraint assumptions to stress-test your recommendation before presenting to leadership.

Stakeholder Simulation — Business Unit Leader Pushback

The Scenario

Role: You are the HR strategy partner.

Stakeholder: Business unit president

"I do not want another HR program. I need something that helps my leaders deliver the business plan."

Your Task & Success Criteria

Present the solution in business language. You succeed when you demonstrate all four of the following:

1

Connect to Outcome

Link the solution directly to the business result the leader cares about.

2

Explain Behavior Change

Articulate what leaders must do differently — not just what they will learn.

3

Defend the Choice

Show why this solution outperforms the alternatives considered.

4

Acknowledge Trade-offs

Be honest about what the solution does not solve and what risks remain.

Application Activity — Select Your People Solution

Using your diagnosed gap from earlier modules, complete this full solution design exercise. This is your opportunity to demonstrate strategic HR thinking end to end.

What You Will Create

1 Three Solution Options

Generate distinct, viable people solution paths using AI assistance.

2 Decision Matrix

Evaluate all three options across the ten decision criteria.

3 Recommended Solution

Select and defend the strongest option with clear business rationale.

4 Risk & Trade-off Analysis

Identify what could go wrong and what is being traded off.

5 Local Adaptation Plan

Specify what must be customized for different regional or cultural contexts.

Measurable Outcome

You can **design and defend** a people solution that directly supports a business outcome — in business language, with honest trade-offs, and with a clear path to measurable impact.

Module 4 — Operationalizing the Solution with AI

Slide 42

Business question: How do we turn the people strategy into execution?

Learner Output

- Implementation roadmap
- Stakeholder map
- Communication plan
- Measurement draft

AI Advantage

Use AI to convert strategy into practical execution tools — bridging the gap between vision and action at speed and scale.

Lesson Summary

Slide 43

A people strategy creates value only when it changes work, behavior, decisions, and outcomes.

Operationalizing means defining every dimension of how the strategy comes to life across the organization:

What

What will happen — the specific actions and changes required

Who

Who owns it — clear accountability at every level

When

When it happens — sequenced milestones and timelines

How

How leaders engage, managers execute, and employees experience the change

Measure

How progress is measured — leading and lagging indicators

Strategy-to-Execution Components

Slide 44

A practical operating plan is built from interconnected components that together ensure the strategy moves from design to delivery.

Each component reinforces the others. Missing any one creates gaps that slow adoption and reduce impact.

Business Scenario

Slide 45

- i A global HR team has designed a leadership capability solution to improve execution discipline. The solution is approved — now it must be implemented across regions with different levels of readiness.

The Challenge

Regional variation in readiness, culture, infrastructure, and leadership maturity means a single rollout approach will not work. The implementation must be adaptive without losing coherence.

Your Task

Turn the approved strategy into a full execution system — complete with roadmap, stakeholder alignment, communication, and measurement — that works across all regions.

AI Workflow — Strategy to Implementation

Slide 46

Follow this eight-step AI-assisted workflow to systematically convert your people strategy into a fully operational execution plan.

Define the Selected People Solution

Clearly articulate what the solution is, what problem it solves, and what success looks like.

Break the Work into Phases

Sequence the work into logical phases — design, pilot, scale, sustain — with clear entry and exit criteria.

Identify Workstreams and Owners

Define parallel tracks of work and assign clear ownership for each stream.

Map Stakeholders and Decision Rights

Identify who influences, decides, and is affected — and clarify who has authority at each stage.

Create Communication Plan

Design targeted messages for each stakeholder group across the right channels and timing.

Create Manager Enablement Tools

Build the resources managers need to lead the change locally and confidently.

Identify Risks and Dependencies

Surface what could go wrong, what depends on what, and how to mitigate or sequence accordingly.

Define Adoption and Outcome Measures

Establish leading indicators of adoption and lagging indicators of business impact.

AI Prompt — Implementation Roadmap Builder

Slide 47

Use the following structured prompt to generate a phased implementation roadmap tailored to your specific solution and context.

Prompt Template:

Act as an HR transformation implementation coach.
People solution: [insert solution]
Business goal supported: [insert goal]
Regions/functions affected: [insert scope]
Timeline: [insert timeline]
Create a phased implementation roadmap with:

Workstreams

Parallel tracks of coordinated work

Milestones

Key checkpoints and deliverables

Owners

Accountable roles for each stream

Dependencies

What must happen before what

Risks

Anticipated blockers and mitigations

Decisions Needed

Choices that require escalation or alignment

Success Measures

How you will know the roadmap is working

AI Prompt — Stakeholder and Communication Planner

Slide 48

Use this prompt to generate a comprehensive stakeholder map and communication plan for your global HR initiative.

Prompt Template

Act as a change communication strategist for a global HR initiative.

Initiative: [insert initiative]

Stakeholder groups: [insert groups]

Create a stakeholder map and communication plan.

Output Should Include

- **Likely concerns** — what each group worries about
- **Desired behavior** — what you need them to do differently
- **Key message** — the core narrative for each group
- **Best channel** — how to reach them most effectively
- **Timing** — when to communicate at each stage
- **Leader sponsor** — who carries the message with credibility
- **Feedback method** — how you will listen and respond

Manager Enablement Tools

Slide 49

Managers often determine adoption. Without the right tools, even the best strategy stalls at the frontline.

What Managers Need to Do

-  **Explain the change**
Translate strategy into language that resonates with their team
-  **Connect to business priorities**
Show why this matters for their team's specific goals
-  **Answer employee questions**
Respond confidently to concerns and uncertainty
-  **Hold team discussions**
Facilitate structured conversations that build buy-in
-  **Apply new routines**
Embed changed behaviors into day-to-day work
-  **Escalate barriers**
Surface blockers quickly so they can be resolved
-  **Track local adoption**
Monitor progress within their team and report upward

The AI + HR Partnership

-  AI can draft the tools. HR must validate them.

AI accelerates the creation of manager toolkits — talking points, FAQ documents, team discussion guides, and adoption trackers. HR's role is to ensure these tools are accurate, culturally appropriate, and aligned with the organization's voice and values before they reach managers.

Stakeholder Simulation — Executive Steering Committee

Slide 50

Role: You present the implementation plan to a senior executive steering committee. They will challenge you — and you must defend and improve the plan in real time.

The Steering Committee

CHRO

CFO

Business Unit Leader

Regional HR Leader

Communications Partner

Legal / Compliance

Their Challenges

- Cost — Is this affordable and justified?
- Timeline — Is this realistic given current priorities?
- Ownership — Who is truly accountable?
- Local complexity — How does this work across regions?
- Change fatigue — Can the organization absorb this now?
- Measurement — How will we know it worked?

⚠ Your task: Defend and improve the plan. Use evidence, logic, and stakeholder empathy to respond to each challenge and strengthen your implementation design.

Application Activity — Build Your Execution Plan

Slide 51

Apply everything from this module to build a complete, executable operating plan for your people strategy. This is your capstone deliverable for Module 4.

1

Implementation Roadmap

Phased plan with workstreams and milestones

2

Workstreams

Parallel tracks with defined scope and sequence

3

Milestones

Key checkpoints with dates and owners

4

Owners

Clear accountability for every workstream

5

Stakeholder Map

Who is affected, their concerns, and their role

6

Communication Plan

Messages, channels, timing, and sponsors

7

Manager Enablement

Tools and resources for frontline leaders

8

Risks and Mitigations

Identified risks with contingency actions

9

Early Success Measures

Leading indicators that adoption is on track

Measurable outcome: You can turn a people strategy into an executable operating plan — ready to present, defend, and deliver.

Module 5 — Scaling People Solutions Globally

Business Question

How do we scale consistently while adapting locally?

Learner Output

Global scaling and localization plan

AI Advantage

Use AI to identify localization risks, plan governance, and prepare regional stakeholder conversations.

Lesson Summary

Global scale does not mean identical execution everywhere.

Effective global people solutions require clarity across five critical dimensions:

What Must Be Consistent

Core standards that cannot vary across regions

What Must Be Adapted

Elements that require local tailoring to be effective

Who Decides

Clear decision rights at global and regional levels

What Risks Require Review

Compliance, legal, and cultural risk checkpoints

How Feedback Changes the Solution

Mechanisms to evolve the solution based on regional input

✓ The goal is **aligned outcomes**, not forced sameness.

Global Consistency vs. Local Relevance

Global Consistency May Include

- Business outcome
- Core principles
- Leadership expectations
- Measurement logic
- Governance rhythm

Local Relevance May Include

- Language
- Examples
- Legal requirements
- Employee relations context
- Manager norms
- Communication channels
- Implementation pace

Business Scenario

A company wants to launch a **global manager effectiveness solution** across four major regions. Regional HR leaders raise significant concerns that must be addressed in the scaling plan.

Regions in Scope

North America

Europe

Latin America

Asia-Pacific

Regional HR Concerns Raised

- Labor expectations
- Management norms
- Language barriers
- Local business priorities
- Change saturation

📌 Your task: **Create a global-local scaling plan** that addresses these concerns while protecting the core business outcome.

Global Scaling Decision Framework

For each design element, apply one of five decision categories to determine how it should be handled across regions.

1	Must Be Global Non-negotiable standards applied universally
2	Can Be Locally Adapted Elements regions may tailor to fit context
3	Requires Regional Approval Changes need sign-off from regional leadership
4	Requires Legal or Compliance Review Must pass regulatory and privacy checks
5	Should Be Piloted Before Scale Test in one region before full rollout

Design Elements to Classify

Business outcome

Leadership principles

Learning content

Manager tools

Communications

Metrics

Governance

Change network

AI Workflow — Global Scaling and Localization

This eight-step AI-assisted workflow ensures that global people solutions are both strategically consistent and locally credible — from defining what cannot change to monitoring how each region adopts the solution over time.

AI Prompt — Global-Local Scaling Advisor

Use the following structured prompt to generate a comprehensive global scaling plan with AI:

Act as a global HR transformation advisor.

People solution: [insert solution]

Regions affected: [insert regions]

Business outcome: [insert outcome]

Create a global scaling plan that distinguishes between:

- Global standards
- Local adaptations
- Governance
- Decision rights
- Regional risks
- Localization needs
- Compliance review points
- Change network design
- Feedback loops

Global Standards

What cannot change across regions

Decision Rights

Who approves what at each level

Compliance Points

Where legal review is required

Feedback Loops

How regional input shapes the solution

AI Prompt — Regional Risk Review

Use this prompt to systematically surface adaptation needs and risks across all regions before launch:

```
Review this people solution for regional implementation: [insert solution].

Analyze likely adaptation needs related to:
- Culture
- Labor expectations
- Language
- Manager norms
- Employee relations
- Data privacy
- Compliance review
- Communication style
- Change readiness

Return a table with:
Region | Likely concern | Adaptation needed | Stakeholder to consult | Risk if ignored
```

 The AI output will produce a structured risk table that becomes the foundation for your regional stakeholder conversations and localization planning.

Region	Likely Concern	Adaptation Needed	Stakeholder to Consult	Risk if Ignored
Europe	Works council requirements	Legal pre-approval process	Regional Legal & ER	Program blocked or delayed
Asia-Pacific	Hierarchy and manager norms	Localized examples and tone	Regional HR Lead	Low manager engagement
Latin America	Language and change saturation	Translated content, phased rollout	Country HR Partners	Adoption failure

Stakeholder Simulation – Regional HR Leader Challenge

Your Role

Global HR Strategy Lead

Stakeholder

Regional HR Leader

"This global solution does not reflect how our region operates. Our managers will see this as corporate pushing another program that does not fit local realities."

Your Task

1 Protect the Global Outcome

Clearly articulate why the core business outcome and non-negotiable standards must remain consistent across all regions.

2 Negotiate Local Adaptation

Identify which elements can be legitimately adapted to reflect regional realities without compromising the global intent.

3 Build the Regional Partnership

Invite the regional HR leader into the governance structure as a decision-maker, not just an implementer.

Application Activity – Build Your Global Scaling Plan

Apply everything from this module to create a complete global-local scaling plan for your people solution.

✓ **Measurable Outcome:** You can scale a people solution globally while maintaining alignment, relevance, and governance across all regions.

Module 6 – Measuring Impact and Building the AI-Powered Operating System

BUSINESS QUESTION

How do we prove impact and improve over time?

Learner Output

AI-Powered People Strategy
Operating System

AI Advantage

Use AI to design dashboards, interpret signals, prepare executive updates, and support continuous improvement.

Lesson Summary

HR impact is not proven by activity alone.

Adoption

Behavior Change

People Outcomes

Business Outcomes

Risk Signals

Regional Variation

Improvement Actions

Avoid overclaiming causation. Correlation is not proof of impact.

Business Scenario

GLOBAL RETENTION STRATEGY

A global retention strategy was launched for **critical digital talent**. Six months later, the results are mixed and leadership wants answers.

What We're Seeing

- Some regions show improvement
- Some regions show low adoption
- Leaders want to know whether to continue investing

Your Task

Create a **measurement dashboard** and **improvement workflow** that gives leadership the clarity they need to make a confident decision.

Measurement Dashboard Categories

Use these five categories to structure a comprehensive measurement framework for any people strategy initiative.

Each category serves a distinct purpose — together they form a complete picture of initiative health, from early signals to long-term business value.

AI Workflow — Measure, Learn, Improve

Follow this nine-step workflow to move from data collection to meaningful improvement action.

		
Define the Business Outcome	Define the People Outcome	Select Adoption Measures
		
Select Leading & Lagging Indicators	Segment by Region or Workforce Group	Review Data Limitations
		
Use AI to Generate Insight Hypotheses	Recommend Improvement Actions	Set Review Rhythm

AI Prompt — Measurement Dashboard Designer

🌟 AI PROMPT

Use this prompt to generate a structured measurement dashboard tailored to your initiative:

Act as a people analytics and HR strategy advisor.

Business goal: [insert goal] **People solution:** [insert solution]

Create a measurement dashboard with: Business outcomes · People outcomes · Adoption metrics · Leading indicators · Lagging indicators · Data sources · Review frequency · Decision owners · Risks of misinterpretation

Business Outcomes	People Outcomes	Adoption Metrics	Leading Indicators
Lagging Indicators		Decision Owners	

AI Prompt — Executive Impact Narrative

☆ AI PROMPT

Use this prompt to prepare a CHRO-level executive update that is honest, clear, and decision-ready:

Act as a CHRO preparing an executive update.

Initiative: [insert initiative] **Current results:** [insert results] **Known limitations:** [insert limitations]

Create an executive-ready impact narrative that explains what is working, what is not working, what we are learning, what decisions are needed, and what actions we recommend next. Avoid overclaiming causation.

- What Is Working
- What Is Not Working
- What We Are Learning
- Decisions Needed
- Recommended Next Actions

Stakeholder Simulation — Executive Impact Review

Role: You present your operating system to an executive panel. Prepare to address each stakeholder's distinct perspective.

CEO

Asks about **strategic relevance**

CFO

Asks about **value**

CHRO

Asks about **scale and governance**

Regional HR Leader

Asks about **localization**

Business Unit Leader

Asks about **accountability**

Employee Representative

Asks about **fairness**

 Your task: Present impact, risks, and recommended decisions to the full panel.

Final Project — AI-Powered People Strategy Operating System

Your final project is a complete, integrated operating system. It must include all of the following components:

Strategy Layer

- Business goal summary
- People implications map
- Workforce and capability gap diagnosis
- Recommended people solution
- Stakeholder map

Execution Layer

- Global scaling plan
- AI prompt library
- Implementation roadmap
- Communication plan
- Measurement dashboard
- Continuous improvement workflow

Operating System Template — Strategy Components

Complete each section to build the strategic foundation of your operating system.

1

Business Goal Summary

- Priority
- Business context
- Expected outcome
- Time horizon
- Scope

2

People Implications Map

- Workforce · Skills · Leadership
- Culture · Organization
- Employee experience
- Governance risk

3

Gap Diagnosis

- Priority workforce groups
- Evidence
- Top gaps
- Assumptions
- Privacy or compliance considerations

Operating System Template — Execution Components

Complete each section to define how your strategy will be delivered and scaled.

1

Recommended People Solution

- Business rationale
- HR levers
- Expected value
- Risks
- Trade-offs

2

Stakeholder Map

- Stakeholder
- What they care about
- Desired action
- Likely concern
- Message · Engagement method

3

Global Scaling Plan

- Global standards
- Local adaptations
- Governance
- Review points
- Feedback loops

Operating System Template — Measurement Components

Complete each section to close the loop between strategy and continuous improvement.

AI Prompt Library

Strategy · Diagnostic · Solution · Implementation ·
Communication · Measurement prompts

Implementation Roadmap

Phases · Workstreams · Owners · Milestones · Risks · Success
measures

Measurement Dashboard

Adoption · People outcomes · Business outcomes · Leading
indicators · Lagging indicators · Risk indicators

Continuous Improvement Workflow

Review rhythm · Decision owners · Improvement actions

Final Presentation Structure

Present your operating system in this order to ensure it is executive-ready and decision-focused.

- 1 Business Goal
- 2 People Implications
- 3 Priority People Gaps
- 4 Recommended People Solution
- 5 Business Case
- 6 Implementation Plan
- 7 Stakeholder Strategy
- 8 Global Scaling Approach
- 9 Measurement Dashboard
- 10 Decisions Needed

Keep it executive-ready: lead with business impact, not HR activity.

Assessment Criteria

Your final project will be assessed across ten dimensions of quality and rigor.

Dimensions

Total assessment criteria

Business Relevance

Does the solution connect clearly to a real business goal?

Quality of People Implications & Strength of Diagnosis

Are the workforce implications well-reasoned and evidence-based?

Fit of Solution & Practicality of Implementation

Is the recommended solution appropriate and deliverable?

Stakeholder Alignment & Global Scaling Discipline

Are key stakeholders addressed and regional complexity managed?

Measurement Clarity, Responsible AI Use & Executive Communication

Is impact measured rigorously, AI used responsibly, and the narrative executive-ready?

Business Impact Measures

These are the potential impact measures that demonstrate the value of an AI-powered people strategy approach:

Faster Goal-to-Plan Movement

Reduce the time from business goal to actionable people plan

Stronger HR-Business Alignment

Better stakeholder clarity and shared accountability

Improved Implementation Consistency

Stronger manager enablement and better regional adaptation

Clearer Measurement of Value

More disciplined use of AI in HR strategy execution

Closing Reflection

Answer each question individually. These reflections are the bridge between learning and application.

1

Business Goal

What business goal did you choose?

2

People Implications

What people implications were most important?

3

AI Contribution

What did AI help you see or create faster?

4

Human Judgment

Where was human judgment essential?

5

Next Conversation

What stakeholder conversation must happen next?

6

30-Day Action

What will you apply within the next 30 days?

Course Close

YOU NOW HAVE A REPEATABLE METHOD

This is your end-to-end system for translating any business goal into a scalable people solution.

Final success metric: Use AI to translate a business goal into a scalable people solution with a clear business case, implementation plan, stakeholder strategy, and measurement system.
