

An Introduction to the Clinical Trial Financial Suite

Module 1

01

Why trial finance fails today

02

What CTFS is, simply

03

Core modules and architecture

04

End-to-end workflow overview

05

Stakeholder value and KPIs

06

Implementation and application practice

Why trial finance is broken

Module 1

Fragmented, manual, siloed finance

Spreadsheets, emails, swivel-chairing

Disconnected EDC, CTMS, ERP

Blind spots, audit risk increases

Slow site payments strain relationships

Delays drive cost and disputes

CTFS definition and promise

Module 1

Unified, AI-enabled finance platform

Orchestrates budget through payments

Cloud-native, API-first, agent-ready

Enterprise orchestration, not point tools

Promise: faster cycles, fewer exceptions

Lower total cost of ownership

Scope and architecture

Module 1

Core scope: four modules

- **Budgeting, contracting, forecasting, payments**
- **Architecture: cloud-native microservices**
- **Extensible APIs and webhooks**

Global-ready capabilities

- **Secure, compliance-ready controls**
- **Global-ready: multicurrency, tax, languages**

Who benefits and why

Module 1

ClinOps

Speed, scale, site satisfaction

IT

Interoperability, compliance, lower TCO

Digital/AI

Orchestration, measurable ROI

Sites

Predictability, fewer disputes, transparency

Pipeline impact

Faster study starts

Velocity

Fewer exceptions, smoother payments

Quick knowledge check

Module 1

1

Check: define CTFS simply

2

Check: name the four modules

3

Check: state one core promise

4

Check: who benefits most, why

5

Check: link value to velocity

Individual practice

Module 1

- 1 Read vignette: spot three pains
- 2 Map each pain to promise
- 3 Write two discovery questions
- 4 Draft one-line CTFS definition

CTFS modules overview

Module 2

- First module: CTFS Site Payments
- Unified workflows, clear handoffs
- Built for enterprise orchestration
- Differentiates from point solutions
- Foundation for future expansion

Site Payments value

Module 2

Site portal: real-time transparency

Automated, predictable payment cycles

Status, audit trail, dispute reduction

Insourced or hybrid operating models

Sponsor-agnostic site experiences

Higher site satisfaction, trust

AI enablement and DeX

Module 2

AI Pipeline

- AI ingestion of CTAs, invoices
- DeX: document extraction engine
- Policy checks, anomaly detection

Smart Automation

- Smart approvals reduce exceptions
- Cross-agent forecasting, reconciliation
- Explainable, auditable automation

Document
Ingestion

Policy & Approvals

DeX Extraction

Integrations and extensibility

Module 2

Integrates: EDC, CTMS, ERP, banking

Extensible APIs and webhooks

Third-party agent connections supported

Global: multicurrency, tax, multilingual

Compliance: GxP, GDPR, HIPAA

Alternatives: GreenPhire, Medidata

Individual practice

Module 2

- 1 Label components on blank diagram
- 2 Mark where DeX processes documents
- 3 Pick three priority integrations
- 4 Write three CTFS vs. tool bullets

Component assessment

Module 2

1

Select all CTFS modules

2

Choose Site Payments core value

3

Pick best integration start point

4

True/false: CTFS replaces ERP

5

Short: APIs vs. webhooks purpose

Workflow

Workflow overview

Module 3

1

Start: grants, budgets, CTAs

2

Ingest CTAs and invoices

3

Triggers from verified activity

4

Auto invoice creation, pre-validation

- Data flows across systems
- Outcomes: speed and accuracy

Validate, reconcile, handle exceptions

Module 3

Controls

- Policy checks before posting
- Anomaly detection flags issues
- Reconcile CTMS/EDC to ERP

Resolution

- Route exceptions with smart approvals
- Maintain complete audit trails
- Reduce manual review burden

Forecasting and reporting

Module 3

Forecasts from cross-agent inputs

Operational dashboards and reports

Currency conversion and tax treatment

Localization supports country rules

Banking integration for disbursement

Transparency across stakeholders

Site portal experience

Module 3

1 Real-time payment status views

Predictable cash flow for sites

2 Clear CTA-to-invoice linkage

Self-service history and documents

3 Fewer disputes, faster resolution

Higher site NPS scores

Workflow practice

Module 3

- 1 Order eight workflow stages
- 2 Mark three control checkpoints
- 3 Write two metrics per stage
- 4 Define reconciliation output simply
- 5 True/false: portal reduces disputes

Stakeholders and drivers

Module 4

ClinOps

Speed, satisfaction, scale

IT

Compliance, interoperability, TCO

Digital/AI

Orchestration, ROI proof

Sites

Predictability, portal UX

Decision drivers

Global, extensibility

Alternatives

GreenPhire, Medidata, spreadsheets

KPIs and proof

Module 4

Cycle time and exception rates

Dispute rates and site NPS

TCO and system redundancy

Audit trails and governance evidence

Economic lens: modular SaaS, TES

Confirm baselines, targets, geographies

Discovery practice Module 4

Write three value bullets each

Draft two questions per persona

Choose three KPIs to anchor

Summarize CTFS per persona

Prepare objection probes, confirms

Implementation and risks

Module 5

Phased, modular rollout plan

Integrate EDC, CTMS, ERP, banking

No-code rules and routing

Governance: GxP, GDPR, HIPAA

Risks: data, tax, change

Mitigations: validation, training, explainability

Objections and responses

Module 5

GreenPhire today: CTFS orchestrates enterprise

Medidata limits: open, modular alternative

AI risk: audit-ready, explainable controls

Integration cost: phased, APIs, accelerators

Site burden: portal UX, less chasing

Adoption: hybrid support, training, SLAs

Capstone and next steps Module 5

01

Role play: two-call ClinOps scenario

02

Handle three objections using facts

03

Outline mini implementation storyboard

04

Draft mutual action plan steps

05

Identify three pipeline trigger events

06

Reflect: three actions to grow pipeline
